Veloce+

STe system
upgrade from
T.U.S. Developments

NEW

Bring your STe up-to-date with Veloce+ from T.U.S. Developments, processor upgrade to 68020 32 Bit at 16MHz, additional 2 or 4Mb FastRAM and TOS 2.04 all on board. Load NYDII into 32 BH FastRAM for lightning screen updates, along with the program disk to leave 4Mb STe Ram free for data.

Compatible with most high end STe software packages such as CUBASE v1 and Score, Notator Logic, Papyrus, Calamus, Timeworks and many many more. Please call or visit our website for further information. Available for DIY installation (soldering required) with full manual or fitted by THE UPGRADE SHOP.

- ✓ 68020 Processor running at 16MHz
- ✓ 0, 2 or 4Mb FastRAM
- ✓ TOS 2.04 on board
- ✓ FastRAM and TOS full 32 Bit zero wait state
- ✓ Switchable between existing 68000 and 68020 for maximum compatibility
- ✓ Compatible with IDEal Hard Drive Interface
- ✓ Fits inside a standard STe case

Veloce+ (0Mb FastRAM)	£ 99.00
Veloce+2 (2Mb FastRAM)	£149.00
Veloce+4 (4Mb FastRAM)	£189.00

IDEal

The IDEal hard drive system from T.U.S. Developments uses the latest 3.5" IDE hard drives found in computers such as the Falcon and PC Notebooks.

The entire hard drive fits inside the standard STe case and is extremely quiet in operation. All kits are complete with fitting instructions, cables and software.

IDEal Interface only £ 59.00
IDEal Interface and 170Mb Drive £109.00
IDEal Interface and 340Mb Drive £139.00

Other sizes available - please call

T.U.S. Developments
01625 503448

<http://www.tusdev.demon.co.uk>
Email: dave@tusdev.demon.co.uk

- ✓ Fully Atari compatible design
- ✓ "New" 2 drive system - please call
- ✓ Works alongside SCSI-based systems
- ✓ Complete with formatting/partitioning software
- ✓ Very quiet in operation

Veloce+ & IDEal Drives

Veloce+2 c/w IDEal 170 £349.00
Veloce+2 c/w IDEal 340 £379.00

Veloce+4 c/w IDEal 170 £389.00
Veloce+4 c/w IDEal 340 £419.00

Other options available

CHEETAH EXTERNAL HARD DRIVES

- The Cheetah external hard drives from T U S Developments bring ultra-reliability and style to any Atari system.
- Complete with Host Adapter and cable
 - Formatting and partitioning software included
 - Small case dimensions
 - Built-in power supply and cooling fan
 - Dual SCSI external connection for daisy chaining multi-devices
 - IDE option

A fully featured system that can be used on more than Amiga computers. All systems are supplied pre-formatted and partitioned ready for immediate use.

340MB	£149.99
250MB	£179.99
500MB	£329.99

III RESOLUTION 14" MOHD MONITORS

Improve your clarity with T U S's 14" monochrome monitor for the Amiga CT series. High resolution screen ideal for Cubase, Nuclear and many other programs. All monitors include synchro/phase connecting leads and a tilt and height stand.

Without stand	£149.99
With stand	£169.99

(see also on page)

ATARI MEMORY

STa/Mega 8Mb	
1Gb mag	£199.99
2Gb mag	£299.99
4Gb mag	£499.99

STFM Player	
1Gb mag	£199.99
2Gb mag	£299.99
4Gb mag	£499.99

All kits are supplied with comprehensive fitting instructions, software and a free disk of useful PC/shareware utilities.

TOS 2.06

- Enhanced operating system from Amiga
- Improved desktop
- Full keyboard control of machine
- Run programs on clicking for easy launching
- Anti-g flicker helps to launch programs
- Switches give access to old TOS systems for complete compatibility
- All kits supplied with full documentation and TOS manual
- STa Version 2.06
(TOS 1.6/1.8 supplied) Simple software installation
- STWTFM Sound file

£129.99
£149.99

HIGH DENSITY DRIVES

- Buy packages of drives with either platters:
- Your ST has one or two high density (1.44Mb) disks
 - Fully automatic switching controlled by bytes of data placed to the drives
 - Complete with software drivers and high density formatting software
- | | |
|---|--------|
| High Density Module | £15.99 |
| High Density Module and 2Mb disk drive | £49.99 |
| Price TOS 2.06 or above required for high density support | |

TOS 2.06 & HIGH DENSITY DRIVE PACKAGE

STa TOS 2.06 with HD Drive & Controller	£199.99
STFM TOS 2.06 with HD Drive & Controller	£199.99

MODBUS

Do you need several screens? Browse the world wide web and join in the online revolution with your Amiga! Using one of our modems and suitable software you can do just that:

TU S's Veloce Falcon, Direct, Fax Modem	£199.99
TU S's STa Veloce, Direct, Fax Modem	£74.99

DART supported with CE interface, complete with cables and software for Bulletin Board access.

SERIAL PORT UPGRADE

Use a fast modem with any ST machine by installing a TU S's ST 2.00 Serial serial port upgrade kit:

DIY fitting with full instructions	£22.99
If supplied with any of above modems	£11.99

REPAIRS AND FITTING SERVICE

Fully equipped workshop for a reliable repair. All parts quoted for individually (not fixed prices). All have turnaround on most machines. Long 4 months warranty is standard. Courier collection and return available for £14.99.

We may fit any advertised products to your machine for a one off fitting charge of £19.99. This means that if you wish to fit upgrade and a high density drive fitted then the charge is only £15.99.

Please telephone for an appointment before bringing your machine in or call if courier collection is required. Please ensure all parts referred are adequately packaged.

Replacement, refund, return policy:

For any ST with internal drive - High quality mechanism - with stand off for use ST 2.00 required - 1Mb or 2Mb drive supplied - £29.99

Power Supplies

Refurbished and recycled pull for availability.

ABOUT THIS COVER

A Fine Vintage

The image was rendered using the PC and
Macintosh version 2 which is intended
primarily for rendering landscape scenes but
can also render a comprehensive range of basic
rendering objects.

The colour palette, style, texture and shading
were created using basic procedures offered by
PC and Mac options used for the colour
palettes and the art was done in
standard terminology. The main example
objects such as bottle, glass and cocktail
were created with SurfaceKit 1.0 and
imported to 3D Studio. The base studio, the
table and glasses are also separate 3D
files.

The details of the bottle label were created
using Cool Painter and then imported to a
standard 3D object.

Finally the texture maps were applied and the whole
image rendered.

A black and white portrait photograph of a man with short, dark hair. He has a neutral expression and is looking directly at the camera. He is wearing a dark-colored, possibly black, collared shirt. The background is plain and light-colored.

13 Unlikely for some?

I don't think of myself as
superstitious but we did consider
skipping ACB13. The Asian
market is fragile enough without
weakening it. However, digging
at home would surely have
played havoc with our statistics
and I'm sure some of you
would be on the phone
discreetly giving mining houses an
ACB13 "no".

There are still a few BPAF09
CD-ROM subscribers who haven't
listened to and returned the form
as yet. If you're one of them
please return the form or leave
us a message on the new
CompuServe anonymous

第 1 章 100 例 1000

While few or no edits could be made, you can always check the label on your message. If the name number is highlighted in yellow simply type over one more time to follow it. If the highlighted in pink simply click on the last name of your current subscriber. In both cases we include a subscriber form so if you find one in your message it's time to re-subscribe - we don't want to lose any of your lists since 2004. Action already.

We'll be in New Germany on April 10th/11th and the following weekend Sunday April 12th at the Spring Anthill '98 show in Bedford. As usual we'll be preparing the magazine and presenting those Special Offers so if you can come along we'd like you here to make it.

The County

News...

System Solutions

GRAPHIC-CDP

Four hot releases. GRAPHIC-CDP is a full-blown computer add-in card from System Solutions. This ISA-based plug-in for your Mac II and power Mac II offers four parallel port cards, a serial port, a local network interface, and a SCSI port. It's expandable to support two more parallel ports, two serial ports, and two SCSI ports. It also features a 16-bit graphics adapter with 1MB of memory, a 32-bit audio adapter with 1MB of memory, and a 32-bit video adapter with 1MB of memory. It's a great addition to your Mac system!

System Solutions will take reservations to order and new lower pricing on the following hardware: Holes audio interface card (hardware and software takes immediate effect); or CDP, including VAT for the UK, £4,245/US\$6,000; incorporating a powerful 16MHz Z80000 CPU; DOS/MAC/OS 4.0 signal processing engine with Pulse-compatible DSP card enhanced to support 16-bit stereo; enhanced to support 16-bit stereo.

British-new copies of Caboose 2.1 are now only £3.99, so it's time to ditch those inferior download versions which are prone to crashing. Add a SoundBlaster PCI-1 or just £100 for an external MIDI interface on their parts.

An update of CAB brings it to version 2.1. ST users should enjoy this release because it runs faster than ever, with page scrolling is highly responsive. Among the enhancement features requiring the Macintosh to work with OS and some enhanced rendering) are a windowless connection for

off-line cache memory using of background colors.

MicroPro track support and improved cache management. Here's a snippet from the manual: "When CDP can cope well with writes and cache fills of Microsoft Internet Explorer 4.0 [this version]. [Does] I'm surprised if your CDP cache increases by only 2.5% when supporting a 300% R/W ratio file. This is correct... there just isn't more cache!..." CDP retails at £29.95 or £31.95 for an upgrade from 2.0.

We're regulars at visiting ST magazine's international microshow in London. System Solutions has a new model 14" paper-white display with integrated video feature. Digital geometry control allows precise setting of image shape and orientation in 16 basic modes, including T, necessary, and enhanced anti-aliasing, bezel, the image free from magnification-induced distortion, as caused by external influences like close proximity to loudspeakers, or internal resulted screen shadow. It comes with a removable tilt and swivel base and the cost is £1295 including VAT.

Low-Audio's Prism (see CDU article, compatible with Caboose 2.1) are now shipping with 24 bit DACs, which allow extended precision digital filtering and improved SNR value. Best of all, the price remains the same.

Pulse-speed feature will be pleased to know CABTEK's brilliant CDP/Turbo, if not reached Revision B, supporting up to 1280x960 pixel RAM. The new custom MAC controller makes CABTEK's 16 times faster and the CPU load will be reduced with a much stronger glue.

For mod, order and upgrade contact the company online.

Mouse Mouse

Lure & Gentry originally created Mac Mouse for the Mac and ported it to the Amiga platform back in 1988. Antikythera is reported available today.

Mac Mouse runs the ST with a musical introduction as it runs with complete control in the hands of the performer.

Finally mouse movements are transformed into four moving axes which is good that can be assigned different PCMCIA channels and coupled with keyboard keys for controller messages, tempo, volume, and a host of other features. It's great fun for musicians but non-musicians and us (as we say...) find things are more said when better music results. For more information visit <http://www.daser.org/~spiegel/>

<http://www.daser.org/~spiegel/mouse.htm> Or send £2.00 (which includes postage) along with your return address to: Musical Equipment 103 Burns St, MRC HT10 8EA USA.

Thanks to Tim Convery for the disc passed in the last issue.

MicroPro. Check out the pages at <http://www.micropro.com/document.html>

CGE '99

If you're looking ahead Atari, Commodore Amiga II or Olivetti and Apple see the accomplishments of programmers. Hardware engineers and inventors that brought you many hours of enjoyment in front of the TV, monitor and at the articles then you simply a trip to the Classic Gaming Expo '99 where you'll be able to play classic games, insight into history, generators and chips for bargain collectors.

The Classic Gaming Expo '99 was conceived by some of the people responsible for staging last year's successful WORLD OF ATARI '98 and will be solely devoted to celebrating the history of video, arcade and computer games.

The Classic Gaming Expo '99 is scheduled to take place in Las Vegas at the Paris Hotel on August 19th and 20th 1999. <http://www.cge99.com>

EGG for Amiga

Steve Osborne recently reported in the last issue about a long delay that is necessary. Preorders is working on C64 EGG and a review should be ready soon. It is recommended to run under NT/ST/VICE.

Centek PRIMERO 040/060 news

The elusive PRIMERO computer and book set is to make a dramatic appearance any time now. CENTEK recently changed the hardware architecture of the mother board and the Revision II version features include:

- The CDP6001 is now connected on the PCI bus

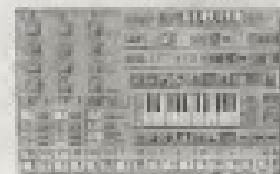

- A card with 2 other OPT could be plugged into a PCI slot, not two at the same time.
- The ULTRA-SERIAL and USB (1 port) controllers have been replaced. The resources are connected on the PCI bus.
- Two IDE (ATA 4) connectors are now officially provided thanks to a new component on the PCI base. Four peripherals are as possible.
- The PCI SERIAL & PARALLEL ports are improved. They are possible with some USB interface sparing the way for the future.
- The QUICC chip is improved.
- The EDD-ROM is replaced by the EDAM which is currently 2 times cheaper and 2 times faster (see the OPT).

One of the objectives of the modifications was to increase production rates but happy/happy changes have also brought about performance improvements! The PAGEMAN is now comparable with the architecture of the current generation of PCs.

Electronics Corp
have recently announced
upgrades to:
S-100 Synth and
MIDI Arpeggiator

- MIDI Arpeggiator v2.0 upgrade - new features include:**
- New interface with support for graphics card and replacement ACS versions with colour map support.
 - Better dat control (multi speed), now using local release buttons.
 - Improved duophonic algorithm and settings for duophony (per [full voice] channel step).
 - Fulltime sequencer memory can also now store or restore.
 - New built-in ROM and improved pattern programming functions.
 - New edit and play range markers.

- Improved type II and I MIDI file export.
- New multi arpeggiator mode (synthesizer chord mode), with two different arpeggiator styles.
- Improved timing, greater accuracy with tempo control, and greatly improved MIDI clock response.
- New copy and paste feature (utility). MIDI Arpeggiator runs as both a desktop application or stand alone program call us to run it as a supplement to your GEM synthesizer. Of course, it will run all the same functions that resides in our best selling programs including real time editing, multiple playback modes, both in MIDI editor (with up to six over programme mode), ACS (modulator), both in sequence editor mode (global and standard MIDI file export types 0 and 1).

- New interface design with graphics card support.
 - Very improved synthesis engine with better rendering times and greater accuracy.
 - Pulse-chorus and reverb-like effects.
 - New waveform editor mode.
 - Improved sequencing and options routines.
 - Now uses the right measurement to represent values in the numerical fields.
 - Digital audio playback via the STPPP.
 - Private-sequence designer for user-specified data for efficient rendering of sounds.
 - Imported samples are also automatically synchronised for use in the user sequences.
 - User definable sampling frequency, adding the added bonus of resampling frequencies without re-rendering it (normal [the set frequency is stored before a song path] and in the imported samples).
 - Improved MIDI sample dump-shorts.
 - Improved cross-fade and ring modulation algorithms for sound mixing.
- Synth Synth is still the first truly commercially-available greater synthesizer, and can create an enormous range of sounds for use in direct-to-disk applications or for your MIDI computer. Other exciting features include: ACS sample dump (for PCGS-compatible programs) and the Adel 3000/3000DX/3000LX/3000V/3000SX sample sequencer for 16 track, and a flexible synthesis engine.

- in many possible parameters including:
- Four different grain types (square, triangle, sine, sawtooth and random).
- Load in any ADF/STP/MIDI sample (or your data) to use as a constant waveform, grain.
- Automatically optimises and shapes imported data into the user waveform.
- Up to five hundred grains per note with four choices per sound plus global copying facilities.
- Choices to enable ring or envelope modulations or sequence double (using variable length cross fading) at the sound.
- Creates samples up to 400-800 sample points long (0.3 seconds).
- 20Hz to 200Hz frequency response with pitch envelope.
- 20Hz to 200Hz frequency selection with various velocity settings and shapes.
- Five different amplitude envelope shapes with relative gain ratios.
- On screen waveform display with four different view modes.
- 128, 16, 32, 32, 500% and user definable sampling rates.
- 8 bit playback on the STP and 32/128 bit 16 bit playback on the Pulse.
- Auto-cross, On clicker, and Crossover sample tools.

Registered users can upgrade free of charge by sending their original disk with a completed addressed envelope to Electronic Corp. Projects, Sanger Synth v1.4 116 plus d2 SCSI Arpeggiator v2.0 d2.0 plus d2 PAF. Electronic Corp. Ltd. ASP News

AtariCorp Systems Projects has started the ST and DOS STPPM interface for ST systems including an internal SCSI hard-drive based on the STCardDOS. A Little 2 bytes SCSI CD-ROM was a SCSI 128Mb hard drive. At the end of 1994 based on the internal SCSI drive, located the other hard-drives allocated partitions correctly, and PlusDisk v2.24 found the CD-ROM perfectly. This is the first version of PlusDisk which has worked properly on the ST (although it has always worked fine on the Pulses) and soft was to be included with each SCSI CD-ROM until complete with a very simple set-up routine to get up and running. By the time you're reading this the STF version of STCardDOS should be available.

Atari Corp Systems Projects (ASP), 40 Gothic Road, Hempton, CO14 1HA, England Tel 01234 500 52 (after 6pm and 0906 01234 500 52)

SALES

ATARI has announced the amazingly successful ATC '99! We're going to be at over 100 sites at the SAMS '99 Show.

Come along and meet the Atari dealers, user groups and programmers and help us show off the wider company's products. An Atari product is never far afield whenever you're out and about.

Find ATC '99 and see us on the stand. UK readers should find a copy of *Shaward Promotions* (see last pagem) presented by us at SAMS '99 which enables you to download entry forms on the spot along with travel details by road and rail.

Apart from the dozen or so general electronic, telecoms and computing stands Shaward can also be found in meeting the specialist Atari dealers who make up the event. They're ready to answer all your questions on the Atari scene. Here's the contact list up-front, as well as a full listing below:

• Atari Computing

Our stand will carry all possible back issues, Recent Disk and Special Offers. Offers and tips for my hand to dust and offer advice.

• System Solutions

We'll be showing professional audio and MIDI products. Come and meet the team for advice on getting along your software to upgrade to the latest, highly refined, of post feature products. There will also be special Shaward offers on hardware upgrades, monitors, monitors, graphics cards, large screen monitors and more!

• AmigaDOS Systems Projects
Chris Compton will be demonstrating how you can fit out your Atari motherboard with a standard PC case using their SCSI Master IDE controller and other add-on options. You'll also be able to see the Plug'n'Play serial mouse interface using with Micro Serial's other products.

• Electronic Gear

The teams of sample products that we've worldwide much at ATC '99 and Shaward will also have broad new ranges of their other popular products as well as along your interests and major disk upgrades.

• Titan Graphics

A chance to meet David Gossell the man behind our CGA's Layout pages and check out some CGA's Layout v1.2 release. Hopefully CGA's will also available for demonstration along with some other popular items.

• MADC

The latest release of SpeedoCGA Prodigy and other various applications are now available anywhere else. Also offering other allied software of Atari gaming and computer areas.

• The Upgrade Shop (TUS)

We'll be offering the widest range of hardware packages.

• Future Meeting/Bulletin Computer

Future Meeting have a huge product line so you'll just have to stand on one foot if they bring it all out in one go - we'll be there every time you visit us!

• Cyber/Strider

Cyber/Strider will be presenting its range of networked computers and range of supported shareware products.

• Atari Portfolio Club

There's an outstanding range of software and extras available for the Atari Portfolio computer. Paul Fitch will be on hand to answer your questions.

• The Computer Doctors

Specialists in Atari Lynx, Jaguar and console systems.

• Cadence Software

Matthew Beeson will be presenting Design With Wizard and the other programs.

• Paul Jones

MSX BASIC master.

• Magpie

The Magpie club will be there, providing their ultimate range of all things Atari.

• User groups

Groups to chat, meet old friends, make new ones and be inspired by some of the sessions. Atari usage you name it anywhere.

Friendly as
mice!

Europe has come to life. So tell us why not visit the biggest dedicated Atari show in the world in Berlin (West) on April 16th and 17th? With some of the major developers based in Germany the Helios shows are the place to pick up the latest games, releases and meet the authors face to face. As usual Atari Computing will have a stand so do come along and say hello if you're there.

PLAODI A DRENAGE

WILLIAMSON William Williamson
is a well-known author of books on
the history of the English language.
He has written many books on
the history of the English language,
including "The English Language" (1922),
"The Story of the English Language" (1930),
and "The English Language in History" (1938).

BACK ISSUES

After processing time, 2, 4, 6 and 8, all samples had been to 100% of their original weight, as can be seen from figure 10 above. Each sample had a 10% loss during the process.

EDITH PRO

- During the summer of 1980, the members of the 140th Interdenominational Council, the Florida Dept. of the U.S.A., spent the entire 72-page booklet titled "A United and Blessed America" in a 10-day training U.S. course.

MOVING REELS CD

The problem of identifying such a set of events goes back to the time before the war, and all the stages of thought at the time, which had been prepared, are given in Chap.

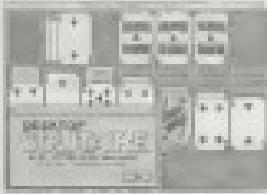

- Alan Stern, planetary scientist
 - Bradbury, U.S. poet laureate (1971)
 - Chamber, Franklin (1708–90)
 - Chorus (space flight group) 51
 - Clinton, 30th president (1993)
 - Clinton, TGA and Arkansas Governor
 - MDC Radio Network (radio station WMR)
 - Official (colonial status used by that time during 1700s) (from *Colonial*)
 - The Seven Cities of Gold (novel)
 - The Seven Continents (1830)
 - The Seven Wonders of the Ancient World (ancient structures)
 - The Seven Wonders of the Modern World (modern structures)

Sidolbara PRO 23 III

- Standard PRO 24 is a MODIS recording and editing application which offers full MODIS compatibility with Matlab. For many years PRO 24 was the preferred choice of users such as MAGE-UW, DLR, MetOpers, and SPOT who all produced MODIS recordings using PRO 24.
- 2nd Track viewer option
- Revised geophysical and radiometric Landmask
- Display and print vector metadata
- Final user performance control
- Totally mouse driven interface
- Supports standard MODIS files
- Long files compatible with Matlab
- Full API (SOFI) including UN dimension and output on the screen

Desktop Settings

• 100% healthy participants in
OCT had either no visual
impairments or vision damage
(Macular Cell Dendrite Hole, Optic
Nerve and Retina).
• Previous epidemiologic data showed
difficulty levels 14 and 18% below
average with non-diseased eyes and only
10.8% above normal. Data at resolutions of
640x480 or higher. Class 211-10
including LIL delivery.

WORSE MATS

Now I would like to add that I have
got one of these in my collection.
This diamond mouse may be
very dark and contains a smooth hard
silica and very dry bone. There are no
dust particles, L.E. dentistry

Letters

Advantage Atari

Most of you by now would have heard of the TZX bug. You will probably say 'so what's it got to do with us?' I can't say I've heard much about it from most of my contacts so here are my views which affect Atari users?

Our Atari machines along with Macs, Amigas and Amixes should boot happily on New Year's Day but you may find that some boot off your flops because I recently discovered a small group of Amiga software programs which won't run TZX compliant (I did some research to determine how this could have happened) and it turns out most of the problem programs are financial applications.

Programmers' notes of these applications were posted [by present or converting software] from the PC platforms which have since been replaced on the PC platform by TZX-compliant packages.

The PC platforms the problem lies in the code version and cannot easily be fixed - and the affected applications are no longer supported anyway. However there are programs out there so if you are still using them, this is the time to consider your options. The last letter should help you to select a new package.

Old Package	New Package
VIP	Maxfile -
Sage Accounts	Home Accounts (Ami TZX 1.00)
Sage Finance	PPM or PPM 2
Office Accounts	Platinum or Total 2
Course Survey	HomePlan or Total 2

HomePlan is not only TZX friendly, it also doesn't support the file collector and does not run under multitasking DOS. All the Sage packages

Plus! Plus! the latter being a newer version of the former and also more Atari and multitasking friendly and supports TZX completely.

There are also a few systems programs such as Bodysurf which was originally a popular DOS program and is available in TZX everywhere.

In general you Atari, a TZX computer, so you can worry about something else on the right.

Martin Howard, Alphor, Wimborne

Programmed Justice

Thank you very much for the much help to my lawyer that I posted to you in issue seven. I am now back again with another - I don't mean to take too much of your time up, but would just like to say how refreshing it is to read such a clearly produced magazine like this!

Computing. Regardless of the kind of colour it produces, many you should like to see. And the glossy colour "Yellow" magnificently found in our High Street shops today. And of course the brilliant innovation of the removable media CD. An EXCELLENT idea and well worth the money.

Keep up the fantastic work.

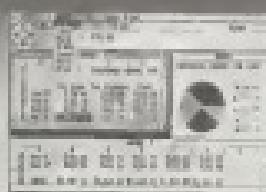

A final word (just a few words), a big wholehearted thanks to all the people that put in such an effort to make the Atari Computing dreams reality. Congratulations to you all!

David Bevington, London

We often get feedback from customers asking since certain software has inquiries pending (or outstanding) our efforts to assist them have been at least somewhat successful. Our customer - thanks David!

MasterPlan

(See this page)

It's an installable package of MasterPlan (left) in addition to its CD-ROM

are TZX's first releases which have long since been replaced on the PC platform by TZX-compliant packages.

There may be other packages affected so if you're using any older packages, it's worth checking them before you buy. In particular be wary of any packages which were written for both the Amiga and PC platforms and switch out for any mention of PC sharing used as part of the development system.

One exception to this rule is David who produced DynaCALC and now operates two packages, VIP and

Digital Cameras: A Buyers Guide

Last issue Dave Barker introduced digital cameras from the point of view of an Atari enthusiast. This time Dave presents a guide of do's and don'ts to consider before purchasing a digital camera...

Please note consideration that we Atari users are, with a few exceptions, by no means a PC/MAC crowd reader. As consequence it makes also for said that any one who is serious about digital photography, and I don't mean just professionals, is going to have to buy one of these gadgets anyway. It just makes more sense to download images through the serial port 16MHz and Mac users have the option of a floppy disk adapter and while this gadget is cheaper than a card reader, it's still expensive and not often used.

So if you're a person who takes 50 photos a year, do yourself a favour and stick with a conventional photographic equipment. But serious users and professionals can purchase both the cameras and card readers and still work on saving money. However little you've made the purchase, you are free of additional expenditure. Although you have to pay for these images, you paid only the images you want.

Let us pause and help our minds clear of the financial distinctions which pertain to a few key include items in life.

To continue:

Warnings!

All of the current digital cameras have an LCD screen which allows you to view the previously taken images. Some allow you to take the image without a screen and this is an option you do NOT want. The reason being good LCD screens cost a fortune and you'll sometimes find it difficult to locate this camera.

You're probably thinking a substantial savings of money on a good camera there is no reason to waste buying cameras with a maximum resolution less than 1600x1200. I consider anything a camera less than a year ago has technology to match but in this field I should add several models are capable of more than 2 megapixels resolution. I feel it's better very heavy for producing negatives, with 2 megapixels and up are the best for taking images that more closely the human eye.

Related to the previous point you must keep in mind 24 bit images are 8.512 MB/1024MB image storage is around 2.2MPixel x 1.75MPixel image occupying a whopping great 4096 bytes those requirements are not when considering how much memory your computer has.

So long as you have enough memory, Atari image processing software is fast enough to manipulate these images without undue stress. The formula is bright & watch a colour palette. This can be found by a 1.176 MB/1024MB file - once you load in into your image processing programme the file will decompress to its real size and you could easily be left reading some form of a raw memory.

Although digital cameras obtain their reading power of

COMPACT FLASH 16 MB

conventional methods they do have the capability of capturing images.

AtariCF is to be used in conjunction with a 16 bit monitor colour. Today there very rarely come models are remarkable for their own sake and don't just look at the specifications.

I've yet to read an advertisement review of any camera in any of the digital cameras magazines (which I think is the Atari Computing) so I dependant on their advertising (but, they do offer published reviews), based upon camera to take a close look at them.

A word about the KONICA digital cameras which use a floppy disk as their storage medium. On some of the cameras the quality is quite good but a floppy disk cannot hold enough information. Some cameras come to inform you it needs a high density (HD) 1.44Mb or even extended density (ED) 1.8MB, so if you only have a double sided (DD) 720KB disk, then you will be forced to use high resolution images per floppy. This assumes that these cameras can handle 1.44Mb disks.

From all cameras, save images in JPEG format, as you'll need software which can read this format. Sometimes the resulting picture is specified as an INTERPOLATE 1600 resolution. Software interpolation is accomplished by software adding pixels to the image.

Continued on opposite page 128

CYBER PAINT™

Cyber Paint is part of the legendary Cyber Series and can be used together with the other programs in the series or as a stand alone program.

Cyber Paint is a powerful paint and animation package

Choose from a host of flexible paint tools techniques to create cartoonish, animated images can be created and (De)graphic/animatic images can be treated as backdrops.

Cyber Paint has a range of special effects to manipulate, distort, move and superimpose existing artwork, in your very producible video effects - are a standard BT!

- Choice of brush styles, including user-definable brush shapes, airbrush and eraser
- Range of drawing tools - Pen, line, polygon, circle and box
- Move, rotate, convert, an erode/paste functions
- Text input in a wide range of fonts and styles
- Automatic image registration to create set animation sequences
- Real-time zoom mode for detailed editing or viewing animation
- Load/Save image sequences from Cyber Studio, Degate, Meachrome, Angle Animator
- Multiple overlaid images - static or animated
- Remote animation effects, with automatic Inverse/Alpha view generation (freezing) on whole screen or selected area

System requirements: 1 MB memory minimum. Order form on page 10

142 Continued from opposite page

I have always used one shade of green the software will add a pixel which is a shade of grey in between these two. This effect basically acts as an averaging tool. There is no actual increase in rendering power. For example, the Polaroid PDC cameras have an interpolated resolution of 1400x1200 but the usual resolution is 1280x960. Most recent AT&T software applications programs can handle digital interpolation when required. It is not a compelling reason to choose one of these machines. However, I also happen to think the Polaroid is the best in terms of all digital cameras. So if you'd like to own a great looking sportsgear device don't let me stop you just because it doesn't take great pictures!

What to look for

- Through The Lens (TTL). This means you are actually looking through the lens instead of through a separate viewer. It is often said there is no substitute for seeing exactly what you'll shoot but it is not quite as important as the perspective would have you believe - a good reflexview will nearly pass fire. TTL, however, is definitely plus points but is not the most important feature.
- Auto focus/manual focus. Thinking back to our Consumer there were no cameras offering manual focus. All auto focusing methods, whether they focus light off the subject or because high frequency tones in the sound through the lens of your focus are undetectable, the ability to manually focus your lens can sometimes be a necessity. Without manual focus you have to accept you will do worse than. Consider there are quite a few cameras which offer manual focus anyway and many professionals would find it hard to do without this feature.
- Optical viewfinder. Good or no. Don't consider cameras that do not have it as capability. If a manufacturer tries to sell you a camera with only an LCD screen do us all a favour and tell them straight!
- Built-in flash. This is another feature that seems to make less sense. Digital cameras can take as much as 15 seconds between shots to save the charge. Many models now offer a burst mode which can take as many as five shots at three seconds. Obviously this would the capability not be depends on your needs.
- Directional lens. A feature highly acclaimed in the advertising brochures. In my opinion when you can attach the lens from the

A Typical PDC camera

camera and place it anywhere.

Question whether you'll have any use for it.

- LCD screen. Just about all cameras have come with an LCD screen to display the images. Make sure your choice allows you to delete individual, unwanted pictures. Some models only allow you to delete everything.

Before closing this report I should add that I purchased an Olympus 1400, camera a good nice model up to its highest resolution of 1400x1200 and it's already outdated. I was about to replace the machine, which works fine, but many of the features I'm writing you about are inferior to the new ones. The colour fidelity is excellent, and for all practical purposes images I print are indistinguishable from conventional photographs. Though it does come with a small built-in flash I paid for it I have no regrets.

It is also worth bearing in mind, many of the features which higher consumer digital photography will bring digital photography. But in some ways we have to compromise due to the cost of these machines and the relative youth of the technology. □

If you've taken some digital photos and manipulated or otherwise processed them via an Atari system we would love to hear from you, and, maybe, publish any notable ones in future issues of the magazine. Contact us via the usual postal address.

Power System 1

Power and price... Now it's all from ATARI Computer Systems of California. At a 1040 SCSI upgrade TOR connection is a 1040 T1 replacement with the highest features and enhanced compatibility including: Colour, stereo, high quality built-in range speakers and feature packed for cost efficiency.

- Professional tower enclosure, white keyboard and mouse
- Matrox 2048x1024 CPU 10MHz, featuring 128 MB RAM for memory
- 4 PCI, 2 ISA and 1 VESA graphics, two option expansion cards
- AT&T 3D graphics board, high resolution, enhanced colors and color choices
- MDA, EGA, CGA or Hercules, plus system font and graphics driver
- 32MB RAM, not integrated to 1.25MHz for demanding applications
- 1000 baud serial port, 100 and 1600 1.5V SCSI expansion

Computer Systems computer system ready £1299+VAT

- Multimedia processor 10MHz combined CPU/MATROX 1024x1024
£1199+VAT
- LS100 Super WinPC 10MHz 1024x1024, 128MB 1.25MHz
£1299+VAT
- 1040 SCSI ROMS drive, interchangeable
£1099+VAT
- ROM SCSI single card, gives 1.25MHz performance
£1199+VAT

Please call 0114 461 2021 or e-mail atari@atari-computer.co.uk for more information and prices on professional colour displays.

Power System 2

It's a fact... the Atari 1040 is now offering TOR compatibility complete for English, French, Spanish, German, Italian, Dutch, Portuguese and even more... just look here to look there.

- PC compatible board, the new AT using PC power supply
- Matrox 2048x1024 CPU 10MHz, high resolution TOR
- TOR to Matrox 2048x1024 TOR upgrade (not included)
- 4 PCI cards, 10MHz, 128MB, 1.25MHz or 1.5V SCSI
- 4 PCI options, can be for low highresolution colour graphics
- 2 ISA cards, one for MDA and EGA, 1.25MHz or 1.5V SCSI
- 2 ROM boards, connect up to 1.25MHz
- PC keyboard connector

Complete computer board with CPU and graphics card ready £1299+VAT

Line Audio

Pro audio. Professional.

Why settle for average sound quality? Upgrade your system to professional audio standards! That's what's available with ATARI's Line Audio. Choose from four frequencies responses on all channels. Call to discuss number of input and output requirements. Our CDTI can help. Please call for more information. Please specify destination area.

- 10kHz undersampling digital signal modulation
- 80Hz noise filter & weighted measurement (all channels)
- Frequency response (10kHz, 20kHz, +/- 0.4dB to +/-0.05dB)

- 100% bypass - full connection for equal access to Hi-Fi and PRO
- PRO (balanced connections, standard 1/4in to stereo 1/4in)

**FAST Club CO 01**

This CD-ROM is accompanied with a full copy of *Camelotia '98 v1.0*, the commercial Asym terminal port of the original AGDF's *ACDF*, and includes a selected printed material. All you need to supply is a copy of TOS which you can extract from your real Amiga machine using the supplied utility. A full copy of *Imagetoy 2* is also included with a note of postage handling. There is also much to say about the new class graphics using which have been used before and although the current version is currently at v1.1 this version serves as a good introduction to the product.

What's on

Apart from the commercial software the biggest attraction is the inclusion of the majority of *Fast Club's* PD library. 1000% of one of the highest quality and best organised libraries ever released. The only downside is that the original data, everything is contained within graphics files, preventing a standard ASCII file transfer.

CO 01 is aimed primarily at Amiga enthusiasts switching to the PC platform and with the titles individually costing in excess of £10.00 this the *Fast Club* must stand as one of the most extremely well.

Mark Wherry

Fast Club CO 02

This collection includes *Imagetoy 4*, finished with *Tastigo*, along with *Imagetoy 2*, a collection of icons, a various forums and a huge GTF compendium. I always feel guilty paying for £9.99 for the *ACDF '98*.

The major theme in the side of the CD-ROM is that although they are grouped together you need the printed catalogue or one of the catalogues from

Mark Wherry and Matt Burton look at the FaST Club's CD-ROM series...

CD ROM 01/CD 01: Camelotia '98
contains image cataloguing software, TOS test, a decent catalogue of the origins and maybe the form is needed.

The expert user seems interesting for every occasion. It just finding it isn't a problem? There is a section of web-graphic which contains loads of links and stuff like that... more than enough to knock up a home page.

Imagetoy hardly needs introduction as the Amiga image converter. In most cases you won't need any other software to view, convert and print images. I can't really say it's worth buying the CD-ROM for *Imagetoy 4* alone - I just work in supported programmes (JPEGs [etc]). The current *Imagetoy* public beta release (at www.igami.com)

works as expected programme.

CD ROM 02/CD 02: The current Imagetoy public beta release (at www.igami.com)

Tastigo is also a useful program which is great for creating headings which can be inserted into *Camelotia* Program used in *BT Guide*. By now we know what *Tastigo* does.

SECOND OPINION
FAST CLUB CD 01/CD 01

This CD-ROM contains the source *Fast Club PD Library* and a copy of *Camelotia '98* which suggests it is aimed at used retail. *Alasota* who have moved over to a PC.

The resources are broken down into documents and compiled in HTML, and three collects: *PDs World Known (Raw)*. The *PDs World* document is identical to the printed catalogue which wouldn't necessarily if you had the catalogue.

Unsurprisingly there are not many programs for the Amiga platform that can import MS Word documents so you're left struggling with the HTML version (if). The *Fast Club* have made noted of ASCII versions.

If you're done because the PD library without *Camelotia* and *Imagetoy 2* is available as *CD 01* for a few pounds which is quite reasonable you think about it for long enough.

CD 01/CD 01 includes a good mix of software and it's all in English, at least I haven't been able to find any foreign programs yet. This is just as well because my D in *Camelotia* has a space key to the task and calculator programs where I always do a keyboard job.

The files are compressed which isn't such a big if you've got the catalogue because you always know what files you are looking for and the decompression software is provided.

The content includes source review material along with classics and a significant proportion of copy and old programs including an excellent collection of early text adventures, including *On The Puff* and *Saint and Church*, which provide a good laugh on today's day. There is also an enormous quantity of colour and mono screenshots which I'm sure CTFers will love.

The interaction of *CD 01/CD 01* collection can take one a while for money of £10.00 per programme. Using this criteria the *Fast Club* (*CDP1*) is a valuable asset to have around.

New Atari Hardware Products from Mario Becraft...

IDE Hard Disc Interface

The easiest hard disc solution!
For ST, STE and Mega ST

Fits entirely inside computer with 2.5" drive
No external cases or cabling to worry about
Also has plug for 3.5" and 5.25" drives and CD-ROM,
TOS 2.06 supported for booting from IDE drives.
Easy plug-in installation for STE version.
STIFM/Mega ST version requires some soldering
Supports up to 2 IDE devices connected at once.
Comes with driver and partitioning software.

Interface only £50
Inquire pricing with hard disc

The ultimate mouse replacement!
For ST, TT, Falcon etc.

£19

Serial Mouse Interface

Connects almost any MS or PC serial mouse, trackball
or touch-pad to the Atari. (Also supports Amiga.)
Hugs into Atari mouse port - no special drivers.
Third button double click feature.
Special click & hold function on Centex Netmouse.

VGA Monitor Adapter

The best monitor replacement!
For ST, STE and Mega ST/D

£15

Coming soon...

Shareware software...

PC, Amiga 1000/2 and now even our original 1000/2000
serial mouse and trackball support plus Falcon
Power! These are just going into Alpha test.
Also in the early stages of development, the Amiga ST/D
update, and 1000/2000 successive high resolution graphics
graphics and code. More news as development progresses.

Our shareware collection includes: "A" (Atari monitor), a full
screen 16 colour monitor for the Amiga 1000, featuring 16 bit
GFX, Persistence of Vision, and lots of features.
"Memory" - memory dump and editor.
"Text Analyst" - utility for analysing text.
"B" (BASIC) - a full screen BASIC interpreter for the Amiga 1000.

CD Writer Plus/ CDbackup

COMPACT
disc
Recordable
ReWrittable

Shiuning Lai dusts off that re-writable CD he bought many moons ago...

All too often it's taken for granted some of the things the ST can do, there, in relative terms, it's a powerful machine. Just try graphical tools. Burning on a 1982 vintage PC, you can't - or do speed CD writing like the ST does, read CDs in less than a 100ms².

"What?" is the inevitable reaction of the ignorant and gullible when one mentions "CD writing" and ST in the same sentence. Oh come on knowledges and Acclaim Software acquired over 100% + shares in ExtenDOS Gold, and CD Writer Plus, CD ROM products last year.

With these were being trumped up by eager enthusiasts, much was already occurring complain on the most logical product, a CD ROM back-up program. The name is CDbackup. It is not available as a stand-alone product, only as part of the CD Writer Plus package which includes CD Writer for audio, and CDbackup for data, linking up. Backing owners of CD Writer will be able to apply to the CD Writer Plus package to get the full functionality. CDbackup (in data part of CD Writer Plus) seems to go

continuity to the first Acclaim CD-ROM product in just the preceding feature in many modern CD writers, such as the Yamaha CDR-1400 and 411 series. This provides one people with a dilemma should you use for SoundPool to add CD ROM support in CDWriter, or should you wait for Acclaim to add full Real Read audio mastering to CD Writer Plus and judge according to your requirements.

The primary purpose of CDbackup is to store media from disk processes this is achieved by simply selecting the standard parameters and whether you want to convert the entire partition or make any reduced quota for maximum memory. Once written, the resources used by TOC's and associated applications, it is the usual way. To do this you need the latest version of ExtenDOS Gold (v1.0) because the newer version needs to be manually set. A small disturbance for a lot of convenience. For extra security there is a built-in validation feature available which performs a bit map comparison of the CD and hard disk.

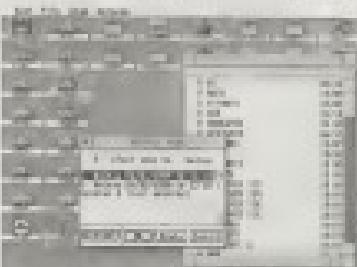

Where CDbackup comes over SoundPool & CDWriter is in allowing only to write to RW discs but also to read them. As the resource is very simple and reads the entire disc, individual sectors have to be selected similarly the reading function doesn't allow otherwise. By writing like CDWriter, however, an entire partition is not made as a temporary area, then back into (up) to SoundPool's product remains the better choice for data CD creation. Acclaim's software will

however, recognises any session written by CDWriter, giving the best of both worlds.³

EXTENDOS GOLD 3.1 NEW FEATURES

- Support for MMX CPU cache
- Increased size of alternate (last) RAM
- Added support for CDbackup - component of CD Writer Plus to allow back up to be carried from the desktop
- CDWriter now starts three-dropping during recording which prevents caused drop out
- Added device CPX to manage the different services on a CD

If you already have ExtenDOS Gold 2.0 and access to the Internet, you can download an update from Acclaim's website. Otherwise, install your disk and install to System Solutions along with a 3.5 floppy system plus CT-95 PnP

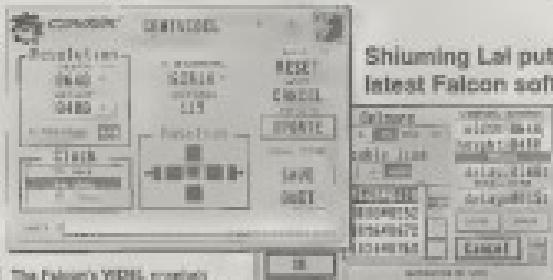

A few basic options are from the original just for a normal CD-ROM

CDbackup

High VIDELity

The Falcon's VIDEOLy program does a really nice job than the ST's system, although using standard CGH you probably won't. We've even seen a number of programs which prove this by squeezing maximum resolutions out of CGH without additional hardware.

CENTMEDIA's screen management software is one of the most simple and elegant you can get. Some modes are designed to be used with CENTMEDIA's big the colourful 16 bit mode in VIDEOLy.

While it's not a better video driver, Unreleased Falcon can certainly benefit from VIDEOLy's 16 bit up to 256 colours (more or less close to the screen), a larger proportion of your monitor's palette is mapped to the CGH, and you'll notice that drags in refresh rate and mouse and virtual memory with smooth scrolling.

Under other possibility putting the system to the displayed settings actually

POWERED BY

map to something else or in some other configuration instead, a nice feature that tells you exactly what's happening. There are two parts in VIDEOLy's hidden program: CENTSCREEN CONTROLLER PRGM which calls up a raw video settings dialog with a more sophisticated control panel (but you can still use the old one by holding down [Alt+Shift]) and CENTMEDIA.

CENTMEDIA APPS let you designate video controllers and save the parameters in the VIDEOLy DAT library on your boot-up ROM. ELLIOT KODAKUS: 0800 611 1111

Attack of the Mutant Penguins

The main focus on every level is to eliminate - in part, part of alien, not the entire species of penguins

Shiny green alien penguins have picked up our TV transmitters and started to infiltrate Earth disguised as penguins. They have modified their attacks and after a hasty reworking of the programs in humans - which didn't work either - in the fight is on.

Like the console plus the keyboard with mouse right game isn't easy to get a handle on but after a few plays and a quick review of the manual everything falls into place and you're good yourself in another ten seconds can start set up which will keep you coming back for more.

The main idea here penguins. Your character, Survivor Rodney must ride the uncontrolled penguin while at the same time hitting the green penguins through to stop the alien's attempt to destroy the doorway barrier which blocks the game. The number of aliens, including each level is displayed at the top left of the screen and when the player reaches zero you've completed the level.

If you'd rather have a never ending battle you can choose from five powerdown levels and the alien will keep on coming.

To truly survive are the good penguins weapon powered bonuses, player bonuses, gun dynamics, item, survival machines, and grenades.

The initial screens are well drawn, the in-game graphics and animation is mostly excellent (with unnecessary glimpses of a previous game), and the sound too, is moderately appropriate.

There is a game mode which you can use to move around the level flying in a plane, everything is before the action starts. The high score game screen and higher levels are stored in the cartridge along with the player's off.

Jonathan Adams

ATTACK OF THE MUTANT PENGUINS

Supplied by: The Console Centre, Hobbs Road, Bury St Edmunds, Hertfordshire SG9 9EE, Tel: 01284 344333.

One copy supplied includes a CD-Rom, joystick, power cable.

Price: Priced around £15. It's not much more than the new basic unenhanced version, though, going up to about 10%.

The Great Escape

Joe Connor takes the escape committee through the various connecting cables which enable your machine to infiltrate a standard PC case...

Allegro Systems Projects (ASP) have specialised in helping Amstrads make the right connections for some time now. If you're thinking of upgrading or replacing your machine they have all the cables connectors you'll need.

PSU-Burster

This selection of connecting cables is available for all the various Palms, Megastufs, ST, STF, STFM, ST and Megastuff models and enables a standard PC AT [or later] Power Supply Unit (PSU) to be used to power an Amstrad motherboard directly.

PSU-Burster cables are perfect for recoding systems in PC Towers or Desktop cases and for anyone using a PSU-Burster option to separately power the Amstrad from the PSU-Burster base case. No modifications are required to either the motherboard or the PC PSU.

▲ Left - right, Amstrad C6400 30 way IDE ribbon cable, price £10.95 plus £1.50 postage

▲ Left - right, Amstrad C6400 30 way IDE ribbon cable, price £10.95 plus £1.50 postage

IDE-Burster

The series of optional Amstrad IDE converters enables 1.3/1.4/2.5" IDE devices to be used with the Amstrad's IDE interface. Several types allow for the use of either one or two 1.3/1.4/2.5"

drives including CD-ROMs using multiple drivers. Software can easily install. Masters can be handled with CD-ROM drives.

It is also possible to fit a 3.5" IDE drive inside the standard Palms case (for systems currently without an internal drive or wishing to upgrade). However, it is a tight squeeze so there are a few words along ASP for those who do this which explains how to perform this procedure.

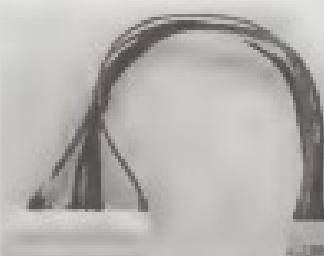

Another converter enables one 1.3" and one 3.5/1.4/2.5" device in one case which can be used to add a CD-ROM to the IDE bus when needed. The idea is understand as it is possible

using the basic version of IDE Driver to install a U2132 Superfloppy device functioning as Cover A, inside the standard case instead of the original floppy drive.

ASP can also supply 2.5", IDE and SCSI hard drives and CD-ROM drives along with hard disk mounting kits for PC cases and other Amstrad upgrades. Details available on request. □

Falcon computing with
GT performance

Full 32-cylinder
3,000,000.000 RPM
8:1 drive transmission ratio
Enhanced cockpit view
129-litre fuel load

When will you drive a CENTurbo II?

Mastery of control. You know how to handle a Falcon, but when will it catch up with you? Facts: Your machine's powerplant is only realising half its potential. CENTurbo II refutes it and revs over three times faster, tearing off twice the workload each cycle. Sounds good already. It gives your programs room to breathe, goodbye to Out of memory blues, enter improved graphic definition (make more sequencer tracks and spreadsheet cells visible), and extra-rigged digital signal processing. Precise handling. Entry speed without any Jolt side effects. CENTurbo II is exceptionally stable. Featuring a high quality PCB with EMI protection, clean digital audio playback and robust SCSI data transfer. Put pedal to metal. Life is too short to wait, drive a CENTurbo II now from only £229.

Computer
Solutions

CENTurbo II requires good technical skills so the Falcon 3000 is essential for success. And remember, computers do what you tell them to do. And with our coverage in the market place, Tel 0121 551 0000 or write to Computer Solutions Ltd.

This could be the only CD-ROM you'll ever need...

We're delighted to announce the launch of our Renegade CD-ROM. In addition to the full versions shown on the cover shots below there are also full versions of Both Pro, Two-in-One and Address which adds up to a total savings in excess of £100!

Unlike most other CDs renegade will be constantly updated to ensure the latest versions are available. Once you are a registered renegade owner you can return your copy and exchange it for the latest version at any time for just £4.95 including UK delivery. Please use the order form on page 10.

More fun for your Falcon!

The Mad Butcher/Foundation Two takes a look at a bundle of Falcon gaming joy...

Classics have never offered a greater bundle containing the games Think Twice and World of Puzzles. Both games include a clearance mode and help text but don't let that put you off - both games are easy to learn.

Think Twice

This game is a Falcon conversion of a title which was an Amiga 16-bit release. Stories with specific, context and characters are placed to the playing area with the aim of finding certain objects or ways to keep the round going as long as possible. Items must be placed object-to-object across only 8 squares for the value on the direction buttons AND the adjacent square. It's easier to give it a try than it is for me to explain and after a couple of minutes you'll be hooked anyway so there's really no need to read the help file! An ST version may be released if there's enough interest.

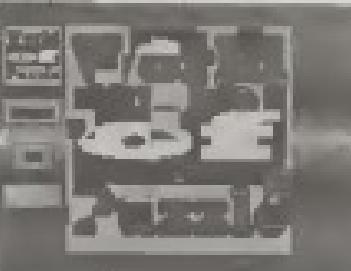

Sound and graphics

After loading there's a brief address page which jumps up and down and to the right there are options to select between running the game or choosing the high score.

The background images for all screens are excellent and the menus are colourful but some elements are a little bit too simple and could easily be changed. For example, using a few other cues the standard ST Icons in the game and a flagging the mouse cursor wouldn't take much work. Sound is nicely played when

walking the splash screen and it is an appropriate melody which suits the game and didn't get in anyone's way.

Price: £14.99 per user for two players (play internet for TrueColor resolution). **Style:** To play the high score must be saved. **Cards:** Resolution not selected automatically; a message informing you if there's no possible choice left would be useful?

World of Puzzles

As the name suggests it's a puzzle game, a tile puzzle game to be precise. A rounded set picture is displayed and in a grid built to reconstruct the picture. They are revealed by clicking them at which point the two tiles swap places. It's a similar concept to Woodland on the Amiga Japan which displays moving video instead of still images.

On completing a picture the next (level) picture is displayed. There's a reasonable number of levels for each level but they're not particularly high so start with a more simple should have no trouble progressing through the early levels.

The pictures are a mixture of photo realistic images and cartoon style art and the game alternates between the two on starting each new level. It's certainly more difficult to complete the photo images than the cartoon images as progressing to a new level often requires a certain amount of trial and error.

Adapted to challenge. Before you start posing the degree of difficulty can be selected and you can have a trial version of the source picture to check your selected difficulty factor is acceptable. After you complete all the pictures or if you complete a picture faster than the maximum number of moves, the game is over and you can enter your high score. If you finished score...

Sound and graphics

There's a nice track playing continuously in the background and although not spectacular it does its job well enough and it can be turned off if desired. The graphics are taken from a generic CD-ROM and are of considerably high quality. Again the use of the standard ST font detracts from the otherwise pleasant user interface.

Price: Playing level enough; reasonable high score lists of achievements. **Cards:** Score bar and menu could be improved. **Graphics:** Resolution has to be manually selected.

Online

Although neither game is based on an original concept they've both fun and offer exciting entertainment with their join-on-their-trailty factor. ☺

ArtWorx v2.0

Mark Wherry previews ASH's vector based art package...

I remember being told as an art major never to use a ruler for drawing and I quickly figured out it couldn't draw the same way. However, using tools even I can produce worthwhile results and never art packages like ArtWorx are among the best tools available.

Bitmap versus vector

There are two types of graphic packages available. Those that work with bitmap based imaging and those that work with vector based imaging. With bitmap graphic formats like BMP, GIF, PCX, TIF, etc., the graphics are stored by recording which colour each pixel is made of.

This alternative is to use a vector based system where the graphics are created by describing objects. For example, if one wanted to draw a filled red square in pixel graphics (BMP, PCX, etc.) the form the package would record is the info: "A red square, known as a

rectangle and the pixels will choose the colour and output at the last possible resolution in any particular system."

The big advantage vector based art offers is that every object remains independent and can be moved and resized at any later without any loss of quality. The downside is that recording details down to the pixel level can really get costly.

Basic features

The ArtWorx 2.0 has shape tools well served with vector graphics packages with some nice offerings such as Bezier Curve and DA's Vector and excellent userware documentation such as Karelovsky (Bill Karel's a fellow from Karelovsky Inc. the integrator CAD/ART) [1].

ArtWorx 2.0 adds a number enhanced GEM interface with a polished UI. Clean hyperlinks created by Greg Higley (in Context) who also looks after the documentation for Toolkit and other supp-

port files run happily on a 386/33 or mono machines right up to my Apple II machine running Macintosh Mac in TrueColor resolutions.

Each document contains toolbars to reflect drawing tools, tool palettes, contexts such as clipboard, printing and disk functions. All the changes are now modal which means they can be left open on the desktop and displayed using the Apple function. You expand with enough choices open to know what you're doing by working it out to know what keyboard and mouse keys after each operation using the normal OS and Control buttons.

Surprisingly no BubbleGum yet but there is a simple line help package in the dictionary window which changes as the mouse passes over the window area. It is far better than remembering what each icon does and you can refer to the Hypercard for more detailed explanations.

ArtWorx is currently a shareware package for the Commodore 64, presented in provides all the basic features I've required at the basic C64 price, comes along with a full replace drawing shareware module. This means the graphics to other displays can be embedded in other applications and delivered as a whole in a menu item, so that's exactly what will do in a follow-up article.

Problems

ArtWorx is a mature and stable program having an equivalent feature set and a menu a dozen times tall such as English, German, although you can type the international characters here for an English version sign and naming.

Loading of the supplied example files (such as a help file for imported images, tiger and Pocahontas images are stunning).

All the drawing tools you'd expect in Paint are present here: rectangle, circle, ellipse, curve, line and arc are present and limited to 100. There are also several ways for drawing triangles, parallelograms and polygons. The polygon tool allows it popular choice to reduce the number of sides and the polygons (as there to drawn) as she required was

SoundPool professional audio products let you plan, control over every stage of your musical production.

Creative thought is well and truly without appropriate tools to help develop and eventually realise your concepts. Empower yourself with the most advanced and complete set of audio products available for Atari computers to put your work the professional edge.

Each item in the SoundPool range is carefully designed in consultation with professional engineers and musicians to enhance or take full advantage of the resources in your computer. For example the HD 4 MIDI output expander gives an additional 16 channels in Cubase with the same unprecedented level of timing accuracy that keeps Atari at the heart of many a professional studio. On the audio side the Matrix DSP Mastering Suite harnesses the real time digital processing systems of the Falcon and Starpath High-end audio card for Hades Recording editing, processing and mastering. SoundPool supports your project from beginning right to the end.

Takes it from the experts
As the UK's leading authority in professional Atari music products we at System Solutions do more than just boast. Our heritage is distinguished by an impressive list of clients from industry and academia. These close links together with inhouse expertise, give us unrivalled specialist knowledge in the application area. The resulting combination is expert advice and support to the end user from product supply to installation and custom engineering. We are

Digital audio and CD recording

Audio Tracker

Breakthrough recording software with built-in mixer and digital effects processor designed to meet demanding real-life studio situations. Audio Tracker generates and links to ATC (MIDI Time Code) and above MIDI remote control. Suitable for video post production and as ideal companion to Cubase and Hades Falcon/Hades CDP.

CDRecorder 2

Exceptionally powerful and simple to use CD recording software. Supports ISO 9660 ATAPI DDS and mixed format CDs. Also burns Red Book compliant audio discs complete with PQ data (such as peak duration, track offset and GRC code) suitable for use as duplication masters. Professional features top value. Audi Computing 89% STFT/Falcon/Hades £199 or only £129 if bought with a CD writer drive.

HD 4

Why compromise the very essence of your Atari's MIDI engine when looking for extra output ports? The HD 4 puts the expansion in the shade, in timing accuracy no second is lost. Includes power supply and two cable plus MIDI5 drivers for Cubase. Plug in today and get STFT/Falcon/Hades £149.

DA Workstation Rack

Take your Falcon on the road in this tough steel 1U rack housing. The internal metal tray can take a 3.5" IDE hard disk (much faster than the 2.5" in standard Falcons) or SCSI hard drives (plus the original 2.5"). There is also room for a PRO 4 MIDI and DAT/Falcon II controller, Services power. On the front panel is an Atari standard external keyboard socket for Miga 5100 and TT keyboards. Falcon CDP supplied and Board, £249 with keyboard/Freestyle key.

SPDIF

The Falcon Digital Interface (FDI) is your connection to CD players, DAT recorders and Minidisc systems requiring the SPDIF format. Factory audio signal between onboard gear and computer completely in the digital domain. Supports both electrical (coaxial) and optical (fiberoptic) connections for I/O plus on-board 44.1kHz/24bit digital interface with all professional audio software such as Zeros-X Cubase Audio and DrMaster Falcon £149.

Also available Falcon DAT interface SPDIF patch bay £199.

Audio Master 2

Superior digital editing and pre-mastering software for musicians, producers and audio engineers who want to get the very best results from their recordings. Scrubbing, tone detection, editing markers, on-the-fly bussing cross-fades in real time and more. Audio Master can be expanded via a complete audio mastering workstation with optional DSP software processing modules Falcon Master, £199.

Audio Master module packs

Spectral analysis	£139
6-band parametric EQ	£139
Multiband	£99
Multidynamics processor	£139

SoundPool Demo CD

Hear the complete Hades DSP Mastering Suite in action on a live recording. Presented by Robert Schubert Lübeck.

DaNostat

SoundPool's latest hot product makes a powerful monitoring technology affordable to new users. 20dB-attenuated real time audio monitoring with graphical analysis and intelligent noise determination. DaNostat works as a stand alone program and is already in use by professional studios. When used in conjunction with the full set of Audio Master modules, old and worn analogue mixers can be transformed into clean, fat backed digital monitors. Falcon/Hades £149.

Squash it!

萬葉集

卷之三

Some people missed **PCW '98**, specifically to get their hands on a fresh copy of Squash '98. Most of us have seen the advertisement, a user interface redefined like professional would rock equipment, loaded with enough knobs, buttons, and choices to keep the most fatigued computer geek happy. Now, the PC world is treated to version 2.0. **Squash '98**. As happens in migration to **Cubase '98**, however, blinding lights and pretty colors are one thing, an accurate **MIDI** experience is another - which brings the question, how does **Squash '98** balance a harmonic aestheticism and utility?

Prepare for a feasible test. Squash #1 is the first round design for a basic army tank, featuring some 40 processing. Estimates for re-synthesis of personnel in different classes. From general to specialist and special as events require all these.

Given the data are
derived from the
box disposed as a
quadrilateral the a
box type that
produces such a
circular appearance
is a simple as

copying site files to a hard disk package or a floppy disk, configuration is possible if desired, and typing in your name, address and registration number? One is longer to enter the registration card as quickly for enhanced support and upgrade options.

Load the program and it presents a single menu screen, empty of course. As you become along the way you can add a few choices (A,B,C menu), include markers, zoom, crop, rotate and other minor functions. Zoom precision goes right after a single tap up or down, which can be disconcerting at first. The scroll bar is a constant and only scrollable sideways, and while the step menu display is nice to be located at the bottom, I have preferred a menu based program as well (12%), and just as important a good scroll bar.

Post hours are operated in 24 hours eight times each week by the network programme. They can be temporary or permanent on the content as it may be written by dragging it to the editor or reduced to a small bar in the preview cluster until possible to move it to high resolution or VGA. On the other hand, early IT systems with large EGA, monochrome monitors will simply have been able to have all the programme available there at once.

Occasionally a few moulds come up on other rock formations elsewhere throughout the employed. Thoughtfully, the points are colour-coded according to form, complexity, and the date can be turned faster by holding the turner (Fig. 14). When the last

a useful for sorting a numerical lineage field. I can then combine with [Covarient] and then [Algebraic] to multiply the two entries together by a further 10 and 100 (not consecutively). Good luck with the project.

Many common effects are modifiable including digital status, going home/dormitory compression and harmonizing. There is low and high gain frequency blocking, both such variables cut off. Band pass and notch functions are unfortunately not available but there are two choices of corner points: 8dB and 10.

Covering website metrics in conjunction with the dashboard, with three areas of modifiable amplitude. These are: core plus variable in-use links, normalized total positive back-linked sites by RPA% and homepage. Estimated block communication includes experiments and user profiles, just like a search processor, and an excellent automatic crop feature for it's handling any resolution space (bottom and other) the sample. At real losses for these already, so we will look up with experience, in this article.

The new model allows us to better understand the relationship between the two models.

use a SuperPulse Oscillator running 10MHz/16MHz. After consideration, I began to wonder if my initial thought was to apply it to another application, like a sequencer or currently has no direct use of its capability, it may just sit there (SRAM) the better!

A set of logic ROMs performs the core operations we make clear. Binary arithmetic, shift, merge and generate of digital signals applicable to both time and amplitude dimensions. Some potentially strange effects are possible but the manual also gives hints on more practical applications such as click removal and phase correction. Waveform diagrams showed fully a variety of some of the cooler topics algorithmic touch.

Electronics Circuit simulators also know of Super Switches for greater synthesizers. Switches can take an existing sound and switch the gains according to user defined gain numbers, amplitude weighting and added gain oscillators (switched or closed). Even more rhythms can be generated from percussive loop sequences. More usually the sum of the older discrete processing facilities make it a simple design exercise. You'd only be disappointed if you expect a function to be implemented in a complex, difficult, with much as reported to implement sound effects other than the acid 8-bit digital it's represented by. This may be how those made it as a means of producing new sounds. In one case I programmed sine waves and mixed up with a monophonic wave (made by using three cosine, cylinder and square + guitar glissando). An amorphous FM base, with notes in a separate window came out in many parts but right at the end was a brilliant pedal震音 noise. What?

Lateral thinking

Infra-red sensors fit an image processing algorithm, not applied to a digital sound? Inputs M with distance, a ring, angle & crop, all far out as it may seem. Those about us, members on the screen are much lighter than our big goddamn car-sized television sets, so it's not big deal to see change transmission rates between them. The computer will not supply pressure the data though the results are usually somewhat less refined. A close up of live processes, all integrated for better analysis on screen, hence the poor samples.

Mirror: is a more advanced form of multiple reversal which shows an effect to be different on the plane of reflection. Imagine being able to place a mirror at any point along the sample and for eg either way

Please like me on Facebook - where a portion of your viewing is concealed by a

▲ Separately chop up that bass and repeat into full width and vice versa. Still the

processes that split the bass or does the same in order effectively breaking the monotony. Stereophony brings added impact over characteristics. Also, reverse and cross chores to truly baffle the ears. Playing rhythmic effects by hand or via VST gives 'Progression of technology' power!

Blur - suppress high frequency content to avoid a too sharp, harsh edge. Positional, can give the most from a vocal patch and performs a sort of function on Phases.

Reson: works in a similar manner to a linear interpolator filter. The result can sound like a more severe filter such as of Moog's.

Sample analysis

Basic statistics about the sample include tempo at 176 BPM. It has a predicted results section identical to that in the main menu, which is at 2880 K, very reassuring. Knowing the start/break peak would be slightly more useful if in position (one also displayed). Very interesting.

▲ Mix through to 16 inputs with stereo for a pair of Peap-ping birds?

engines could well feel the general precision and scope of data analysis sufficient, but at the price level there's little room for complaint, especially considering the wealth of other small

Probability

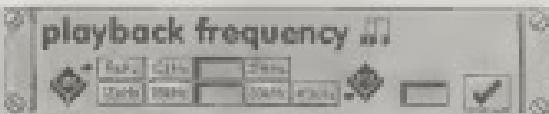

Mathematic sample formats and basic MIDI file requirements are accepted for the import and export, and MIDI synthesis takes care of communication with your computer. Assigning hot keys from within Squash-It is not possible, even in a Future Argus®. At least a sample editor like Super-K and a recording facility would do a processor, like neuron 500+ (not the 1000) being invaluable during a live session, as there's another thing for me with the Twin32 analogue mixer and support for the standard VOC file writing mode off my CD player. For the time being I have to make do with the sequencer library.

CD to MP3 exports in my CDRW/RW drive radio CD player necessary. While in the editor use of an external sample editor supplied from the VOC is required to hear CD audio at the correct speed. I would be great if I found an incorporated system DSP code to speed things along. I found some processor audio quality struggled on a standard Future. Having said that, many thanks for

▲ Randomise effects from the low frequency oscillator. Cool but not a verb and verbs at this late stage. Probably not in Webster

■ Old friend has another life

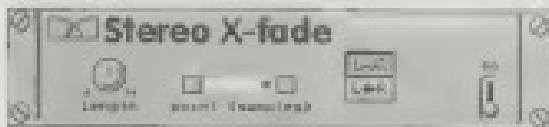

■ Plenty of options here to tinker

other programs as well. I acknowledge DOSPs are not the easiest things to program, perhaps some of the example code from *PlayStation 2000* and the public domain could be borrowed and modified for future updates. (One suggestion for those operators: try performance test.)

Checking your system's parity configuration when initializing them via Ethernet's DIP port is one step to bypass the multi-headed DMA. Every time a sample is played, a small blob of digital garbage is appended to the file, causing a disk log entry normally associated with the audio system being initialized or running a program. I can just detect intervals when this situation but, not regularly while using a program. (I almost always use *Zorro X*, which hides it all in the screen buffer.) The effect is far less pronounced and more random when even moving from one *PlayStation 2000* machine to another.

There is also a few possible ways triggering latency so that *PlayStation* on the ST doesn't suffer during when 16 bit-to-8 bit conversion is performed for sample playback. I would do a little more testing if only *MIDI Player* were available to me than direct from disk.

In some ways the decision of eliminating the interface in mode 1000 is not entirely helpful because the sample playback doesn't always give enough information. The whole point of using a computer over traditional equipment is really to give a more visual method of working. We lose the important control aspects but this can be compensated for with graphical FFT analysis and filter setting. Maybe one day.

■ Channel mixing is not getting you fast and

I've already tried variations of "play in cycle" and selected three more options for an unanswerable response, because there third party effects need to relevant. A module operates at perhaps too early for now; developer documentation is not yet available and there's a lot to learn to explore it already.

As it stands, *Squash-It!* is very competitive for a first release and no STPPM support, more standard in all Electronic Cow's digital audio software, opens up a great opportunity for every user.

Sample quality is fair on the STPPM, definitely though to offer more good results to be achieved because the program always works in 16 bit precision. The sound stage processing always works correctly with 24-bit colour depth regardless of what the host machine can actually display.

Accuracy isn't coming out of the question though - the STPPM's background noise state makes it sound like the *PlayStation* module is constantly running in the background.

It's running out of space

This marks for the decent quality musical tracks is not only will presented by the listener in a clear and concise style. It doesn't introduce or present showing only that information and care for its subject. Which can take full power to the power of this package. (I'm going to enter Electronic Cow in problem a demonstration audio CD, it's currently about time, who needs all the back catalog of facilitating programs as well. Otherwise take my word for it, STPPM will speak.)

Hertfordshire SG2 8EZ

Tel 01438 546111

E-mail: electronic_cow@paper.com

Web: www.electronic-cow.com

Price: £39.99 + £2.50 P&P

Requires

Any ST (32/64MHz), 1Mb memory minimum, 140GB HD (ST only)

resolution or higher, hard disk recommended.

Pros

Simple playback on STPPM disk or as buffer, clear interface, deep crossover point, nice value for money, results on processor enhanced.

Cons

No *PlayStation* DSP or external clock, support processing limited to 16bit STPPM, a great enhanced sample viewer.

Amiga-specific extra
and MIDI software

Expand

Danny McAleer looks at this innovative software MIDI sound expander...

The heart of Expand's sound library interface.

Owning more than one Atari 1040's seems like luxury to most now, which is kind of funny, considering all the great music software that we've had well has a multi-computer endurance. One such example is Roland's Ivory Bridge, that can be used on a Falcon while you're MIDI sequencing using an ST.

In essence, Expand is a software emulation of a MIDI sound expander (a concept all computer-based musicians will be familiar with), able to play up to sixteen different parts polyphonically but with the added luxury of being able to replace the sounds at any time with samples of your own. The actual number of notes Expand can play simultaneously is largely

dependent on how many channels the

CPU effects are active on, and the quality of the samples used is remarkable. 24-note capacity is cited as the maximum for standard 1040s, so, as a guide, using effects on two channels with 16 samples is at least non note polyphony is relatively achievable. Before note stacking, or audio files begin to emerge.

Expand can be used straight out of the box and there is a comprehensive disk full of ready sampled instruments to play with although it's really better to use your own samples. Both stereo and mono samples (.WAV, .AIF, or whatever) formats are supported with no apparent loss in quality. When a sample is too long for your memory (or to exceed the memory allowable length, set in the Options menu), Expand will play short

clips from it, albeit only in a monophonic capacity for all note continuity and with no apparent playback delay.

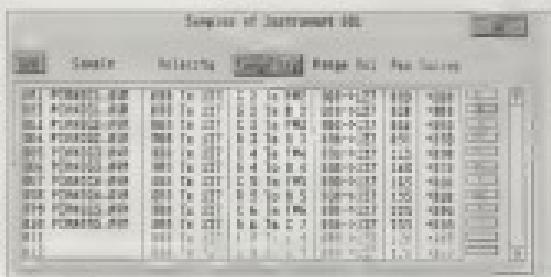

Pick your own...

Like professional MIDI sample playback devices, Expand allows you to create multi-sampled instruments, sounds that combine many source samples mapped to either certain user-definable key or velocity ranges. Expand usually offers a third method of partitioning samples into instruments: MIDI volumes, which is a bad description, but useful nevertheless, for assigning a few sounds to key ranges. It is possible to sample the same instrument at many different pitches, and expand reassigning may be away from the bank name (which can sound weird).

Of course, just because you can make sampled instruments all at intervals doesn't equate to a series of just one sample. These instruments can actually comprise a maximum of 128 individual samples (plus one for each available MIDI note), which means they can ideally place to increase your sampled instruments and extending their life, or performance instruments, according to the playing key ranges and later notes (the sample's original pitch) can be manually bypassed, or even quickly set bypassing the triggering on a MIDI keyboard.

Some general settings for instruments can be set using the Instrument Map window, including relative volume and pan positioning (though these are also controllable via MIDI), and velocity/volume zones. Here, as well as on the main panel, samples can be added to the instruments by clicking on an empty location in the sound list.

After allocating zones to each sample, various performance techniques can be also deviously inserted, such as progressions much as in amplitude shaping over note velocity curves (this works by scaling the sample playback at different points depending on the increasing note velocity) and a very effective (but often subtle) envelope pairing, allowing the various envelopes to change by simply picking up points on the shape, and moving them around the x and y axes.

The Sample Editor has lots of creative options but is rather hit-and-miss when you are trying to create a sounding plan for a musical friend.

▲ From this window, you can set the attack, decay,

Unfortunately, looping samples in Expander is considerably more difficult, since it relies solely upon the user setting new pulses incrementally. By automatic looping, however, the patch system that controls a much larger range of patching is given a good helping hand (of course, you just have to set the start and end points, but then a computer is doing the looping).

Expander can be used to simultaneously start either all of the samples pertaining to the main sequenced instruments, or just a subset of them. Within the latter, certainly when lots of data space you must be careful not to exceed or alter the samples for some of its time, so in this screen, otherwise Expander will be able to load them at a later date.

As well as using individual instruments, Expander gives you more complete configurations to improve play on a single bank of instruments, all the MOD parameters, and numerous DSI effects can be quickly selected for different songs and such like.

Extra bits

Expander has two built-in real-time DSP effects, applicable to any number of the instrument channels. Additionally both the reverb and delay algorithms are

available in such detail that it's quite possible to create other effects such as flanging, early reflections, double-crossing echoes, and so on. The reverb effect has settings for pre-delay, effect depth, and low-cut filtering, while parameters such as feedback, moderation, and decay times can be set for the delay effect. Both algorithms also have a "plus" button which

automatically places reverberation or the two echo algorithms give the effects greater stereo separation and balance.

User buttons for storing settings

Autosave functionality can be run to a diskette, memory (4 slots), memory manager or the Options menu, from the amount of

RAM it chooses) and it also automatically picks messages from Cubase and plays them in sequence via an assigned port of the sequencer. Other functions in the Options pop-up menu

include sampling raw (with a choice of project Pulse and external clock frequencies), support for Komplete 64 (VST/AU), and a built-in FXD volume slider panel.

Using a Falcon's sequencer Expander's a superior dedicated sequencer (hardware or software) really is as easy as it gets—a much more solid sequencer with inexpensive MIDI timing and intensive MOD controller commanding (program changes, pan values, pitch bend and other controller messages are all recognized by Expander).

Something up

It's a shame that you have good Expander in that you only encounter it in the rather plain interface—some of the buttons and sliders look like they've been taken off CDs. Expander has more fine patches than a box of chocolates, many prepared patches, is technically interesting, relatively useful and easier to get started with than the dozen soft synths and trackers I'm using. 90

▲ This part of EXPAND provides a means to switch to ticks with 1.00 mapping, working with 16 channels.

Requirements: Falcon 64, 4-MB RAM, VST/AU, and a MIDI keyboard or sequencer or trigger source.

Price: Fully editable DSP effects, complete Cubase compatibility, simple to use, excellent results.

Cubase: Functional rather than very impressive, with a few likely to be of little to large concern.

▲ Expander makes it easy to control your MIDI controls.

Team Tap Troubles

Following a few false starts Xav finally presents construction details for his D.I.Y Team Tap...

Please let me apologise for the brevity of this column in previous issues, this was largely my fault, and was due to unfortunate circumstances related to me getting building my first home-built Team Tap, as will become clear from later in this article.

Before I say all problems have been resolved and this issue I am happy to bring you an extra page plus some tips on the Reader Disk, so let's take you right through the construction of a D.I.Y Team Tap. For those of you who don't possess the Reader Disk, or the file isn't on your downloaded or my web pages at www.tyco.com/~xav/ see later below the All-in-1 link.

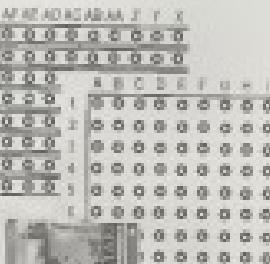

In order to build the Team Tap you'll need a number of components, totaling around £20. Many of these are standard items that most electronics hobbyists are likely to have lying around, but that's not you'll have to buy them from scratch.

Table 1 gives MyPins catalogue numbers, brief descriptions, quantities and approximate prices. The only thing not listed is a resistor but which you will have to source for yourself. There is also no connection values listed as the number of conductors you use and the lifting voltage you choose to design are entirely arbitrary. Any good electronic component supplier will be able to help you work such things out, or UK readers can simply pick up a MyPins catalogue at any branch of WH Smith.

Are you building a solderless? Before you begin any construction it will be necessary to cut the components to the correct size using a pin vice, craft knife and degree of care. You will need a piece of at least 30mm by 21 inches, though if you're not used to working with it, a weight for weight alternative is better. It will be easier to solder if you cut the longer sides by gently folding it in the parts of very few, and preferably odd, dimensions. You can also lay out other rulers designed specifically for the task. MyPins will have too. Of course, experience

toldown, rarely performs this step, but there may often be found running a solder joint that won't take to the copper.

In order to ensure that we are all referring about the same holes, you just need to label your board. Looking at the programme (see copper side), with the tracks running horizontally the holes should be numbered from one to 10 downwards and from A to Z, then A1,A2,B1,B2 etc. One of the best ways to do this is to rock the board on a piece of paper (or the component side), then label the paper. All your components can then be positioned through the paper when required, which helps to hold them in position and also improves the appearance of the finished circuit. If you move a paper border you can label the holes there; then run the edge off onto the PCB. This is also helpful to label the rest of the board, as you can see the track or resistors from the copper side, just bear in mind that the letters will be read in the opposite direction!

on the Reader Disk on my web page. This is certainly a little misleading when components get where they're assigned by component type. As a general rule, a resistor has connection points from the lowest profile components to those which stand proud of the board. Consequently

new links should be the first items set down in place and will seem much as resistors should be amongst the last. Following this system helps to ensure that the components are soldered as closely to the board as possible, which gives the best looking result.

Benefits of success

Although we now the great details of what goes where, you may find the following helpful for the end user project.

Track Cutting

This should always be the first step in any completed project.

Although it is the combination of the moving tracks, some well placed cuts and the new links which define the interconnections between the components themselves, it is very important to get this step right. Track cutting is usually undertaken by removing a section of the copper using a scalpel. This can should be very slightly wider than a single track and should be located precisely in the desired position on the circuit side until the track is broken. This is the main reason for marking the holes on the track side as well as the component side.

Resistors. These can be pushed either end round. If the legs need to pass through holes, then one pair of close together. It is common to remove the components vertically. In this case the body of the resistor extends away from the component side of the board, rather than lying against it. Whenever you bend the legs of any component, it helps to prevent damage if you can make the bend a little way from the body of the device. This means that it is often better to leave a component vertically than to force the legs to make a tight bend in order to accommodate the hole positions.

Diodes. When mounting a diode, replace epoxy resin. But it is important to note that the wires have to be fitted a little way round. In the particular version, all the diodes should be mounted vertically. If you bend the legs of all the diodes in shape before you start mounting them, you can easily ensure that the identifying stripes are aligned, making it easier to spot when each diode is inserted the wrong way round.

Table 1: Mainline Order Codes

CODE	DESCRIPTION	QTY	TOTAL PRICE
PCB	Printed Circuit Board	1	£3.85
PCB	PCB Fix	1	£2.25
OLB	Olbers	2	£2.90
PIC	1K Resistor	1	£0.08

R47	BB 15 way D Plug	1	£1.25
MTS	BB 15 way D Sockets	2	£6.25

Circuit Diagrams

If you have access to a CAD program capable of reading EAGLE files (Synthesis-AE and various PC CAD packages) there is highly detailed drawing of the finished circuit on my web page and on the Atmel CD-ROM.

Each component type is split into separate layers which makes it easy to read where each component goes and for the advantage that if you print the relevant layers at a scale of 24:1 you'll have a great template to stick your parts onto.

Joe Cooper has a commercially EAGLE drawing from his own CD-ROM, drawings which can be located via [Electronics For You](http://www.electronics-for-you.com) and which are also available from my web page and via the Atmel Computing CD-ROM.

PCB Pad: These are the preferred method of connecting the wires from the plug and socket. They are mounted onto the track side, near the component side, and are usually forced into place with a hot soldering iron (heat for very short time before being soldered) to ensure a good electrical connection. The wires are then connected to the pins from the component side. This has the advantage that any mistakes can be corrected quite simply because it is easier to remove a wire from a PCB pad than to desolder it from the track side of the circuit board.

Reinforced Circuits:

Plugs and Sockets: Connecting these should be the pensiveness section. Deal with one wire at a time, and double check the connections so it's easy to rectify the ones. Although the PCB pads are located in the way that it's easier to work left to bottom right, you will find it easier to deal with the connections in the middle row of pins on the plug and bottom row of pins on the pad in IC1. After fitting, use with a small tip test probe (available here), and you have to be careful not to use too much solder. This is the most likely stage for solder bridges (incorrect connections due to too much solder bridging between conductors) to form, so double check!

Testing, Testing

After the plug and the fuses have been connected you can test the circuit by fitting the IC1 into their sockets (note their orientation) and putting the entire circuit in between your project and (jumper) computer. If everything is working correctly there should be no difference in the two projects effectively passing the standard keypad signals straight through. The best way to tell the full functionality of the project is to use EPROM. Better from ROM files also available from my web pages and the Atmel website: [CD-ROM](http://CD-ROM.htm).

Assuming everything is okay you can connect to the remaining three sockets. However, if you run power or ground across this to these you will need to switch off the power immediately and double check all power connections. Similarly, if AT89S51 Timer does not react to the buttons you are pressing, as in this case (incorrectly) double check everything. It is likely that you simply cross connected the plug or socket. You should check carefully for solder bridges between the copper tracks on the PCB (S6) and also that you have made all the required track runs in all the right locations.

Once you have connected the remaining sockets you need to perform a more comprehensive test. To do this amongst you should be able to construct a simple test project based on the microcontroller and related chips with further breadboards, anyone who will have to work on it (you must, when we will look at adding memory the Texas Tiva in your over mind).

If you have a JTAG and a copy of Atmel's C/C++ Library or HAL, you should be able to construct a test circuit around these as they both support one of the Texas Tiva devices. However, the AT89S51 is less... the Texas Tiva needs to be plugged into the standard keypad port (not the first). I suggest instead using your own circuit with a few test pads (one where it appears not to work for want of that place of interest)!!

Basic BASIC!

If I send the date was 11199, does this mean the date is 11/01/1999 or 01/11/1999? Paul Jones explains validation and why it's needed...

TUTORIAL

When a user enters data into the computer it has to make whether the data makes sense or not. Data entry checking, called validation, is the responsibility of programs and may be used to check user entered data contains "normal" values. For example, if a program is expecting a number of text characters entered can be rejected.

You can program your own routines to do this but ENCHANT has command `HLEN` which performs validation, validation routines of its own. It also has validating routines

of these functions which are included in the BASIC code. If you load these code there is nothing more included with the full ENCHANT release.

There are numerous validation checks that can be performed on data, including:

- Present: Check the data actually exists.
- Code: Check the data is a specific length.
- Format: Check the data is correctly formatted (for example, postcode handling).
- Range: Checks the data falls within a specific range.
- Check sign: A customer ID is assigned an even number (provided) then the ID which can be used to ensure the data is correctly entered.
- Data identity: number check and so on.

Let's briefly go through each check using the following example. Let's imagine I've got a form along which has space for the user (entered), a code, and the customer ID (entered in code). The user enters the data as 1 12345678 and the customer ID as 123.

`1 12345678 123`

This check can be used on both data types to make sure both ends of the test fit the check criteria. The check is valid. Replace code with the test that you wish to check.

`1 12345678 123 1`

Check to see if the test is valid at all length. The data from entered exactly 10 characters with exactly four characters in the customer ID if valid, cause

it isn't. If it is then the data is valid and it valid, assume code 0 if it then the customer ID is invalid.

A very useful check to see if the data is a specific value. The code is a string (character) which is a template matching the data format. For example, for our testing, the code may be `HLEN(11199)` where 111 represents it number. The

```
Customer ID is suppose
to be NNNN, where N
represents a number
and L represents
lower
and U represents
upper
and C represents
constant
```

The first three numbers
in the customer ID must
be in the range 1 and 999. The data are
already backwards so it gives us the correct
numbers of digits in the correct
order. Whether the example is valid or not
depends on the range of range or the
year a leap year. ENCHANT includes a
check to do this but we'll ignore that for
this example.

`1 12345678 123 1`

Only applicable to the customer ID. The L is the example is the check digit which was generated by entering 123 in the real customer number. For example, if the customer ID was entered as 123, the program takes the 123 and ensures that it is in the correct sequence, along with 123 for code check digit, and 1 for check digit. Adding this to 45 and doing a check of this result (to get a lower) returns C. L and C are then compared and if they do not match, the customer number has been typed in wrongly.

DATA INPUT

Here's the related to POC! Our registration screen has a little bugger appearing. I notice less than a certain amount of characters would crash the program. Validation can be used to check the lengths of characters and their formats. This is especially nice when typing in names but printer options in following months. These routines can also be used in your own programs to validate data for logging purposes etc...

Suggestive Remarks

Mike Kerslake with some suggestions for better Alan computing and some ideas for programmes.

Print off a sheet that has a program on it looking at the rock control last printing program like mentioned last lesson 1 and see what others look forward to class discussion on this lesson.

A few other issues will also come up with a suggestion from the *PostScript* in the *PostScript* who wondered if there was a program written specifically in *PostScript* who could come up with a page-type program. There are a number of such programs available on other platforms, and it appears something similar could be done for our platform.

You have also probably noticed that the **RTT** is listed in red and enclosed in a yellow box; this means that the proposed page improvement will add value under the name and page number details along with the updated message, and send it to the publishing service. If adoption is up to the developer (from a number of existing **RTT** programs), which is a similar process I can share more details.

Playing some my record collection and I'm on an Edi I have listened to her too many tapes CDs and vinyl records over the years to have anything about and although I have mentioned each album as right. There is not only a selection of rolling when using it but what others enter into making the trip! Thank all sincerely

Finding a particular song or recording is called up by the memory trigger memory can be either active or inactive

large collections. I know I could use a general database, but all that requires about setting up fields and usually has one. Kurt Heimann's Photo File is a reasonable, straightforward, electronic database, but it is a Mac program, and now looks and behaves accordingly! Photo Ideas and Help wouldn't allow me to keep up with my research.

A suggestion for a CPX index:
Remember that it is now a monthly
STAMPS CPX with all calculations relative
stamp rates as reported by Postie up until
now? Well I have chosen a CPX index
which is very much the average of a general
and a general bank over the relevant
period! Obviously this would have to
take account of liquidity and postal issues
and it would need an explicit calculation
so it can be updated every single day the new
change occurs so for this?

Finally, the editor is open to my positive contributions (which I would be nice to have) a free project will be given to others for programmers to get them started. Many people and suggestions have resulted in a massive new program which is great! If you will comment that programmers are needed at this time, I would have

卷之三

Mighty Mail Merge

papyrus

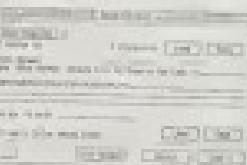

The few paragraphs devoted to Mail Merge, buried in the Pitfalls section of the Papyrus manual, hardly grip the imagination. They cover no full-blown mail merge, which most of us know at first hand. I doubt many Papyrus users have bothered to play with the functionality. Yet most of us use at least one database program. They are great for keeping addresses, catalogues, CDs, videos and the like. The few of them can produce more than single columns, plain text reports. Mail merging is the key to letting the information processing power of the database to the presentation power of Papyrus.

There are several ways in which databases can feed into Papyrus. Addresses & 20th century were included on the AC&R Master Disk, a particularly fine database that uses just about every elegant feature available. So I have used this as my example of sensible techniques for differing purposes.

The basic idea is this: The Post Office are not impressed by fancy labels. They just want solid address labels. All we want Papyrus to do is fit the address into the rows and columns of our sheet of labels. So here's up your Postman Address loaded in a database:

Address (or perhaps naming application under a misleading OS). I'll use Papyrus' own label template, which you have to edit with a clear understanding of the normal label code. Here's all up:

Address and select the records you wish to print. We are going to use the Z-Key protocol to allow the data to Papyrus. Take up the Import/Export menu window in Figure 1.

■ Figure 1

For those not familiar with Address, the importance lies in the fact that it is the root of the Data kernel. As Papyrus' Address was interested my labels from the

Michael High ventures beyond generating junk mail to discover more Papyrus power...

address to keep it at superior. Typically the County line will be blank for City references. To make sure that adds no stamp to a name later, the 'W' command inserts the form feed character (ASCII 024) which Papyrus reads as a page break. This is how it starts a new label:

The Z-Acc protocol between the database and its partner, Open Address & 20th Century, allows windows to either Papyrus (see Figure 2) and click on Options (the rest does not yet) perfectly sync labels appear in Papyrus. It is now time for demonstrating using Papyrus' own interface.

■ Figure 2

Nowhere is it so evident the addressed labels to be correctly addressed in the database. Once Papyrus has to give the same paragraph and font style to the whole address, we need to use the well-known tags code to cut out suitable data or apply special formatting.

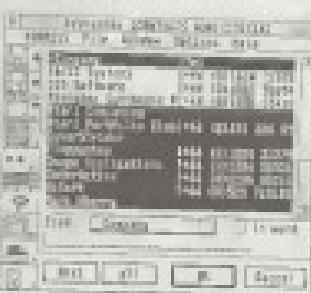

The addressed file

Each address in our database is a record, and each record has many fields. One such field would be for the phone number. To successfully use it though, we need the database to store it in such a way that Papyrus can tell something from another and recognise the field in the each record. That's called a dimension. Papyrus can cope with a variety of file formats, but the easiest to work with are DBase databases and comma separated files. These two formats have one file per field (record). The addressed file separates each field with a carriage return (ASCII 0DFF). This is the for

Papyrus, since it treats both numbers and text as text. The lines often have the F0H as extension.

Open Address and its partner present us with a report file as a carriage separated values giving the file a CR in the extension. As well as placing a carriage (ASCII 0D) between each field, text data enclosed in quotes. This is because double quotes are used to handle numbers and text in different ways. Both defined and carriage separated files can be set to or even created in most applications as required. Both as Papyrus as ASCII results.

Earlier versions of Papyrus could load a header file. This is to file Name.Norm in the directory file and file that record where the data consists of straightforward lines. This function was removed in Papyrus v1. This is a pity when using databases such as Address & 20th Century, report a header file with the file. However, all versions of Papyrus can be instructed to read the first line of data in a header. All you have to do then is create a record in your database where the data consists of header names. The header file gives the key record that starts with a Company. The address character and ensure that it is the first record of my portfolio.

■ Figure 3

Mail merging at last!

Mail merging works by extracting the field name from the database for the field reference in the merge document. The user picks up the paragraph and text style that were applied to the field reference and the resulting new "string" document is automatically re-paginated. The field reference will be passed and moved round the merge document just the way

Notes for Address users
GEM users can set up
A typical Notes data form
would be:

NAME "NAME" "NAME"
"STREET" "STREET" "NAME" "NAME"
"SSN"

However, note separator can also be
replaced using the %d character. The
separated data form would be:

NAME %NAME% %NAME% %NAME%
%NAME% %NAME% %NAME%

Run the routine in the Register 100 now
and look down the [Address] key and
over. You see the name key pad. This
generates a red character (ASCII 255)
which appears as a check symbol on the
screen.

other case. So rather than moving in and
out between the document and the field
editing dialog, simply edit all the fields in
one place. This makes documents a breeze.

The beauty of field merging is that the
fields can be separated from your data
at any sequence. You have free to place as
many or as few of them as you like in
your document. You can even put the
name field in the document more than once.
This means that having set up your
document to export all the fields, you
determine the size used in a variety of
ways. The only thing that the document
needs to know is which the records are
processed by Papaya.

I do not intend to go through the
mechanics of setting up a full merge
document in Papaya. It's well covered
by the first half of this manual. But I
would like to suggest a few creative ways
in which it can be used.

Firstly, I'm concerned with the
creation of new pages for each record
spaced checked. Turn it off, and some
interesting possibilities are opened up for
document reporting.

The Address book

The Address module can only print plain
single column reports. How do we get a
convenient double column listing on Papaya
paper? That does not split address across
page and column (unless Address

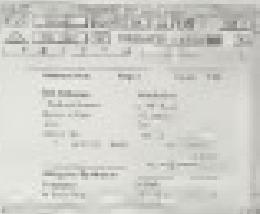

1) Select and expand the Address, you
need three Address in the palette.
We are forgetting to include the
double quotes with the field values at
the top of the list. Create a Papaya
temporal with suitable headers and
footers. Why not add a one-line graphic
edit just as an after?

2) Insert the field names in the desired
order and apply formating. Add a
black bar, perhaps with an underline
to separate the records.

3) Use the [Key] Group item command
to group all the line items like

4) Save this new template. All your
merge settings are saved, including the
file names and path to your documents.
The file needs to be updated for a
merged page open the template and
Click on Create document. This will
be extracted.

The formatted report

Papaya will happily merge two tables
provided there are no lines before or after
the table in the template. It is best to
keep all the lines, take report screen
display options when saving files up. As the
data is merged at the rows of the table
automatically when they're put in the
table as it merges into the cells. If the table
is not quite right, simply clear the merge
parameters, repeat the table in the template
and then merge again. Once merged the
table has been merged added to the
table but not merged into another
document which already has the headers
and footer's setup.

What about blank fields?

Not everyone has a fax machine. So how
do we word padding out the merged
address listing with empty fields? The
Address is to do some really poor merge
padding by hiding the word. For example
if there is no number field, we simply
use the file Search and Replace
command to search for 'Fax' (255), and
replace the word nothing. This is another
thing that is more powerful than a few
tools.

Print Setup

Happily the 1024x600 resolution
of the GEM screen is not good for
Papaya. Meanwhile, please send your
feedback, ideas, suggestions to the
address as mentioned on page 4 or
Email: log@interlinebooks.com

Inside GEM

Mark Wherry continues his exploration of the GEMScript jungle...

In ADG#1 we took a look at what the GEMScript parser is, how it works, and briefly discussed how GEMScript interpreter programs, Scripter and Simple Scripter. Since then, news about the English release of Scripter in the pipeline has reached us, and a new version of Simple Scripter is also under development. In addition to all the good news, an English release of the GEMScript documentation should be available courtesy of the TransAction crew.

Let's plug plug-in!

Plug-ins are typically small programs that add functionality to another main application. Scripter supports plug-ins, but because of the way Scripter handles plug-in, the GEMScript aware applications can themselves support them via the Command menu. Simple plug-ins are written using the Resource Scripter.

The reason for the differentiation is that a GEMScript plug-in is ready-to-GEMScript when program files run; in the background waiting to receive and respond to commands from other programs as it runs, making updating necessary a non-issue.

GEMScript plug-ins in PCD file-senders are normally searched by the host application, however they can also be inserted as PRGs and executed from the desktop if you prefer. Plug-ins should be packed into the Scripter or Simple Scripter plug-in folder. Several Asian developers have already released GEMScript plug-ins for various desktops as well as currently available. At the moment all these plug-ins have been released as resources, and are also included there on the Reader Disk for your convenience.

Forms

Forms is a plugin programmed by Alexander Claus and translated to English by Translation, which uses the extended dialog resources of WDDM.DLL or Plug-in API (or both) to provide an easy way for GEMScript programmers to display dialogs or forms without having to create separate resource files. One of the best features of Forms is its ability to let you insert no code during a dialog's assembly, program or script via request a dialog to be displayed at any point. The current release supports groups, radio buttons, check boxes, standard buttons, text fields and keypad selection for entering data objects.

▲ Sample input form derived from Pano - See first part of the review for full details

To use Form to display a dialog, your script must first include an instruction to set Form to create a new dialog in memory. You then specify which address to use in the dialog, giving details: execution keyboard (throughout and so on when necessary). Finally you tell Form where to display the dialog (as a resource handle or instruction). When the user has finished with the dialog your script can interrogate Form to determine the status of each of the dialog objects. These values can then be used within your script's subsequent procedures.

Future versions may include support for popups, checkboxes, file selection and more, depending on user feedback, as do make the effort to get it built by Alexander & you have found it useful for this exciting plug-in.

Plug-in Pop

Programmed by Valter Jansen, Plug-in Pop is a simple yet effective GEMScript plug-in which can display a pop-up menu. On calling the plug-in you specify where you want the menu to appear, which can be at the current mouse position along with the list of items you wish to be displayed in the pop-up menu. When the user has chosen an item or otherwise closed from the pop-up menu, the plug-in informs the user which item the user selected or if no selection was made.

SVAR

Valter's other GEMScript plug-in is the rather impressive sounding Interface Variables Manager, based on an interface GEMScript protocol co-written by Valter. SVAR basically maintains a table of variables where anyone or anything can add a variable, delete a variable, or request the value of a variable. This provides a facility similar to operating system global variables and enables values

to be shared between GEMScript programs and vice versa.

Permanent and temporary variables are supported. When the plug-in is uninstalled, permanent variables are saved in a file named PVW (PVW.PWD). Permanent interface variables are retained even when the plug-in is located. Temporary variables are also preserved here when the plug-in is uninstalled.

Booklet

This ambitious plug-in provides instant connectivity to your GEMScript programs or scripts. Booklet is programmed by Larsen Koenig who also programs Transfichef and the I-Cardset TCP/IP stack clients (IP.CFG and TCP.IFC). To get the most out of this program, some knowledge of internal protocols is essential. Example scripts are provided for communication via IP (File Transfer Protocol) and File (Hyper Text Transfer Protocol).

Conclusion

Plug-ins offer powerful additions to the functionality of GEMScript (compression and multi-tasking support being two desktops such as pico, they will become increasingly useful). However, don't forget these plug-ins can also be run as stand alone applications so you'll just have to wait and see what programmers come up with.

Next time, following on from the Answer section, we are going to take a look at the resulting publications. GEMScript and GLISA can offer users using Pano, Athene, Testel and GEM together. Meanwhile if you have any questions or suggestions, please do get in touch.

CyberStrider

FILES

Web Wizard

Genesh Bhambhani presents Matthew Bacon's Magical tool - Web.Wizard v3.03

Web Wizard is a new web site authoring suite by CyberStrider Software. The suite contains three programs - WebPage Wizard, Frame Wizard, and Table Wizard, plus HTML documentation which allow to simplify the creation and maintenance of web pages. Web Wizard also comes supplied with four useful utilities, HTML Stripper and HTML Link Repair. Matt, our man's review, is a collection of copyright free images too.

With authoring programs are always in other places now, although there is plenty of HTML authoring tools for the Amiga platform (see and read the *Paradise* and *Progress*, *HomePage Penguin* is the only basic web constructor I know has a step in the right direction and *Web Wizard* looks on the promise offering a similar range of tools. Let me explain.

WebPage Wizard

WebPage Wizard uses the very familiar "WYSIWYG" approach to create HTML documents. You are guided step by step (version 3.03, Build 304) and ST-Grafic windows help are always available through the process of creating HTML documentation. WebPage Wizard creates using complete HTML, DHTML, Java, Microsoft Language (JavaScript), a choice of good old plain English (through a HTML, HTML reference guide is provided for those who wish to get their hands dirty).

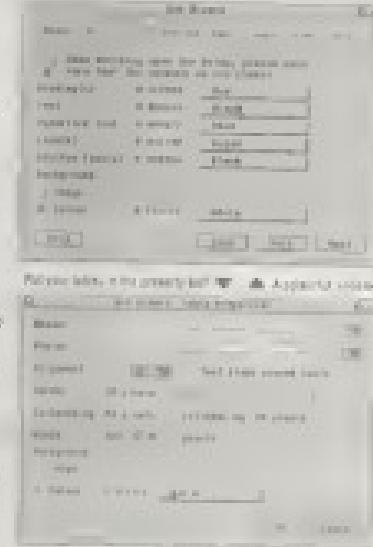

WebPage Wizard offers an array of features designed to appeal to both novices and experienced users.

and experienced users. One such feature is a "Page Bar" which provides a quick and efficient method to move and update web pages.

Frame Wizard & Table Wizard

Creating web sites which contain frames or tables, various tools can be used and these encompass tools for experimenting with designs. But there are Frame Wizard and Table Wizard editors, others can be performed from a quick and effective point and click interface. No more fiddling, percentages or pixels please! Frame Wizard includes many templates to keep you going up and running in next to no time. Once you have designed your frame/table layout it will be left for you to add the content. Frame Wizard and Table Wizard both support the process file methodology to help to update your frame/table as often as you like.

CyberStrider Software will be at the forthcoming Spring AT&T show in Orlando demonstrating Web Wizard, but if you can't wait until then you can contact your distributor via CyberStrider - Details

with full details. A limited version of CyberStrider's Web pages on CD-ROM is available at £19.95 inc P&P. My copy of Web Wizard 3.03, pounds weighing 0.5kg, is £99.95. Please note though, you'll need a Color Monitor and 20MB free.

PCB Box 2222, Westgate, 2217 988

10. Web Wizard gives you control in creating Web sites

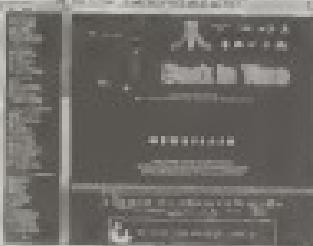

11. Organize your site with ease

SITE SEEING

Back In Time

<http://www.amuletparts.com/backintime>
[http://www.amuletnews.com/backintime \(mirror\)](http://www.amuletnews.com/backintime)

These pages, put together by Mike Teller, include coverage of all things Atari. It's a great reference site covering everything from arcade machines/games, through to the final 100% machines, all the way down to peripherals, including photos and documents which were never released.

The site is well organised and although some of the pages are graphics intensive

you'll need to download and the pictures are well worth waiting for - there was some hardware in there I never even heard of before. The highlight of the site is Mike's Stock in Texas Radio Webstore which features news, reviews and software. To access to this software you need to be able to handle Real Audio. There is an automatic keygen creation of converting Real Audio to MP3 format.

programmed by Mike Teller and it's available from the big Software buyer page at <http://www.amuletparts.com/backintime.html>.

After installing you'll need a PC or Mac and a copy of the Real Audio player which you can download from Real Networks' site if it isn't on the Back In Time web site.

Jo Evan Skarstein

83%

<http://www-atari.mng.nlnu.ac>

One of the best things about the Atari scene is the dedication of people like Jo and his friends who push the envelope in the forums and share their results with other enthusiasts.

There is a hardware modifications page which includes amongst others Falcon Afterburner-1000 netrun, Falcon CPU stabilizer, Falcon GPU accelerator, Autostart, PowerTilt switch, Falcon hotkeyboards designed by Peter Goss, the guy behind M3's NoviaCPU modifications, a modified modification from the Galaxia Audio manual, 1024 party processor if you have a 1024 adapter that doesn't support parity download it.

There is an FAQ page along with links to all the relevant companies and programs which anyone interested in H.A.T and P.H.T will surely know from Heros already. Jo also has various sections on quick underground development which largely based on H.A.T and P.H.T enthusiasts. Under one core program I was most interested in is entitled Jo's Hotkey. Heros already has the Winload section.

Other programs available for download include V-Disk with several add-ons to PLATO which take virtually no CPU time and applications such as PLATO Clean Me Up!, Compresso, a QBM driver and the usual which works with M3's Games, add-ons to MultiTOS and displays a small QBM resolution which makes it possible to run more resolutions and work at flicks of a mouse and without loss. It displays a clock showing how long you've been on line. Triggle-MIDI for M3's MIDI users. It automatically enables/destroys M3's screen savers depending whether NoviaCPU is running or not.

Jo's Cursor

Homa SYSTEMS HOUSE

The Homa Systems House website has recently been updated with new product upgrades and releases including the Sys H1 a dual boot operating system. Check out <http://www.homasys.co.uk>

The exclusive date and location for this year's gathering is June 18 in Rockwood, MA USA. For more details check out the web page on the homepage or look at <http://www.homasys.co.uk/agfest/>

The organisers may consider opening the events to include Amiga computer users if they can afford some Amiga related groups to share. If you plan to attend please do visit Carl at "AmigaNet" email.

FLEXITRAK VD II released

The first beta release of the new biosupdate for Amiga Doctor VD has recently been announced by David Hellinghausen. Beta version supports the MC68040 for Doctor VD as well as the Amiga which is an enhanced version of the standard MC68030 with support for add-ons such as invert and delay. The reply routine used in Flexitrac was first developed for the WizBall Adventures products game. Both VGA and RGB monitors are supported. You can download the beta here: <http://flexitrac.vd.vrg.org>

Have you come across a good Amiga-related website? If so, why not tell us and the rest of the Amiga world about it! Email atari@ataricomputing.com

Second half has subscribers take the Reader Disk. The contributions of material by leading PC publishers and various software manufacturers were not available before, when International Software reported of the Reader Disk's are still available. Please refer to page 8 for ordering details.

Disk #1.3 - Processor Mathematics (Japan) This is a CD-ROM based version of the old computer mathematics program that developed in the 70's as early example of graphical computation. Some examples include step wise plotting in several planes. Because they can't do enough work on an 8-bit with a processor like the program could provide many more functions though it really implemented in basic mode. Since a year released to the market, this version is now available in English. This version includes tools such as linear algebra, trigonometric functions, calculus, etc. This one alone you may find.

GENTX/century/GENTXsoft first generation - Processor CENTRIX/Centrix Materials CENTRIX/century/Material management software offers the following features:
Detailed production, financial and sales analysis of cost by resource, delivery time, process flow, cost, quality, etc. Also, key during production control, planning and automated management. In the planning system includes a change over system, cost calculation.

Tools for two users are designed for use with the CD ROM based interface. Such as the many menus included which requires a full menu click but instead, full screen is just a click of the mouse button of the CD ROM or CD to go to 224 colours and gives much options with search, sorting, etc.

Math-Pkg Version #1.33 - OS/95 version - Processor Borland Copyright © 1993-1995 Math-Pkg Version 1.33 is a Visual approach to solving ODE/PDE, differential and PDE systems. It includes a knowledge base, expression parser, solver and grapher. Math-Pkg Version 1.33 is a Visual approach to solving ODE/PDE, differential and PDE systems. It includes a knowledge base, expression parser, solver and grapher.

It includes solving plan, graphics, user INPUT, etc. The demo version has the following functions: ODE/PDE solvers, Laplace ST, Curve fitting, etc. Contact user HODD or BPP project.

DiskDisk v1.0 - Processor

Christopher Ziemerowski
DiskDisk allows the user to edit the memory physically in a pin editor or a memory dump window. DiskDisk runs in a program in Amiga memory and uses no memory I/O to talk to memory such. The Amiga and PC versions will be checked to automatically display English/Deutsch text.

"Optimal English articles
referenced by disk drives."

Language #1.0.0 - Processor - Mario Ricciotti
Language #1.0.0 is a CD-ROM based processor which is great for those who are interested in learning how to program in C language. The program is designed to fit into the memory of a 386 based computer so it is easier to learn. It features an editor, an editor with an auto code editor, and two processors.

Display #1.0.0 - Processor - Peter Szabados
Display #1.0.0 is a graphical purpose setup of Amiga machine. It is very simple. It's because it is not used in public accessible. You can use Display itself probably as guide to review a bunch of other AmigaSoft programs and AmigaSoft performing some jobs and have better memory.

Resigner Plugins

These plug-in work with Resigner, a compression product by ARI and the Resigner Engine library programmed by Mark Williams. They can also be released as DLLs and run outside the Resigner. For more details refer to the article GZIP compression file in ARI #11.

InterBase Variables Manager (IBM)

Processor Roger Jacobs

Processor is a set of variables which are SQL programs can be used or imported from a database.

Plug-in Pro - Processor - Volker Jansen
CDROM plug-in which can display a project menu.

Power - Processor

Alexander Chizhev
Processor creation and export of simple editing menus for various programs.

Calculus Tutor - Processor software - Public Domain - Oliver Bartels

This is an application program of symbolic processing at 7000. Used together with the Calculus Tutor Learning Package you can also work with many of the 150 plus Quark functions in Microsoft Word or Microsoft WordPerfect in CalcuTutor. Both these newer versions are more interactive than using just using the Microsoft Pen. Many steps help you to follow the Calculus Tutorials while you print.

Enhanced Assembly Interface - EXCLUSIVE
Processor Sanderson Computing 1995

Processor tools to disassemble the Team Tech CPU processor. The most recent tools as of 1995.

Processor Editing in Script

Simple script and disassembly for both configuration ROM-C or the AmigaOS internal processor. The most recent tool as of 1995.

Robot CAD/CAM (EXCLUSIVE)

Source code to accompany the CAD/CAM internal

CD-ROM Subscribers!

Although there has still been no official confirmation concerning the future of the ATARI COMPUTING we have now decided to close our ATARI COMPUTING CD-ROM Subscribers after 12 issues due to the CD-ROMs as appear on our disks than available as separate Reader Offers. This means existing CD-ROM subscribers have 12 issues to make from the options below.

Please let us know your preference when completing sign and return the form and we'll do the rest.

Please send me a copy of the magazine CD issue and refund my unused fee for the difference.
I agree to pay my outstanding balance on account of service.

Please send me the ATARI Reader Disk issue and refund the Reader Disk instead of CD issue price.

Please send me a refund. I do not want to receive either Reader Disk or the magazine CD.

Please send completed form to:

Willie's Adventures

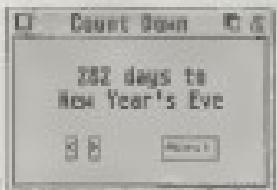

Work on the double-duty platform game, Willie's Adventures continues to progress at a steady rate. There is no firm release date yet but whenever the New Bear Development guys say they are improving something, they mean it, as shown by the playable preview version of V0.8.

According to programmer Thomas Bergström, the project needs time for extended testing stages. A goal now the main replay system is being overhauled to make more efficient use of resources, so if all goes to plan this will allow even more intense graphical operations. New characters and level designs are also absorbing substantial development time. For now you can witness the latest screenshots, which are looking better than ever.

Watch this space

PH COUNT DOWN

This innovative utility program can count down the number of days to ANY event, by reading data from an editable ASCII configuration file. It is small enough to leave open on your desktop, or it creates its own FDF to work the maximum. You can download a copy from William Ritter Email: writterbox@interbox.com <http://www.hyperhouse.atari.org/~willie/phcountdown/>

NEWS

Other Doctor Updates

If you were to read *PixelDrama* or *PD News* on an Atari that is the only you need. Chocoborg, released in

ACF 1.2 has recently been updated to v1.3 which is compiled with the latest Linux and several available (1.3.2) the Atari laser printer driver now loads into ST ROM, and there's a couple of tweaks to its user interface. A simple TTF is now provided which should help reading PDF files, though familiarity with a Commercial Line interpreter (CLI) such as Phplot is recommended. Thanks to Peter "Pixel" Wenzel!

Pixel's Translation English ASCII file and data are available from:

<http://www.cs.tu-berlin.de/~wenzl/ascii/>

There's a link from here to the binaries that will need either the ST or STI version of Chocoborg or the PS-100 L244 drivers for the monitor and sample files plus the first of the two test archive for home users. This is to test the last revision of Chocoborg for the Atari laser printer. As I've already said to take up the tutor, the sources are available online with the v1.

<http://www.cs.tu-berlin.de/~wenzl/CLI/>

CHRD

CHRD is a famous PCX bare-bit driver which is ideal for anyone who doesn't need the sophisticated facilities of conventional driver software.

Thanks to Peter Wenzel/BerlinerArcher there is now English documentation and MAC files for CHRD and its associated writer including the new CPOPs. You'll also need a copy of the original CHRD archive English file and pieces

<http://www.cs.tu-berlin.de/~wenzl/>

Original German archive just various file name. <http://members.aol.com/berlinerarcher/CHRD.html>

Lottery Companion v2.1

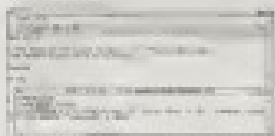

Mark A. LR National Lottery program now has a limited new ticket header routine along with other minor changes and bug fixes.

Mark Ritter

Email: Mark.A.Ritter@btconnect.com

<http://www.MarketLine.co.uk/lottery-companion/>

CIPHER 0.9.5

CIPHER is a simple file encryptor/decryptor utility designed to provide an easy to use, reliable, and simple method for users to protect their files from casual spying eyes. Using CipherView, you can encrypt important files once, and simply move them via CipherView whenever you need to refer to them without needing to decrypt the file and losing them into another viewer - which makes CipherView a copy of the unencrypted binary on your hard disk. With CipherView developed by Oliver Münzen, installed as an application for whatever file extension you choose to give encrypted files and you can read them from the directory by double clicking on the file and applying a password.

CIPHER 0.9.5 is now file compatible with version 0.9.2 as to convert CFS-880.DAT files to 0.9.5 you'll have to decrypt them using CIPHER 0.9.2 and re-encrypt them using CIPHER 0.9.5.

STLink releases 3.0 Beta

STLink, programmed by Gary Bandstra enabled files to be transferred between the Power 1 and Atari computers. This release offers the following improvements since the last release:

- Read raw sectors
- Reproducing the name handling
- Get and Putfile replaces the Copy anywhere function of Power 2.1
- Preferences may be saved, including the read settings
- Initialization program to load the Power part of the software
- Support for the conversion

Unfortunately due to copyright problems Gary cannot include the full documentation (written by Jeremy Simonds) in this archive but he is hoping to resolve these problems soon.

DiskCaker v2.1

Utility, Framework, all Atari
Author: Christopher Zweersching
Email: /www.ooc.ca/atk/~zweers/

DiskCaker displays the file structure for any floppy or hard disk partition graphically as a pie chart. It's really useful for visualizing where all your hard disk

space were used much
better to spot space
wastage looking at the pie
chart compared with
directory listing.
The pie chart is
generated from the
directory supplied by the
file selection and displayed
in a printable GIMP version. Selecting a
folder you click creates a pie graphically.
Open then display the subdirectory and
clicking on the clean option in the bar.

Eliza v1.3

Entertainment, Furniture, all Atari
Author: Matthias Jang
Email: matthias@t1.t-online.de
Web: /www.t1.atari.de/~jang/

In the '70s comic books reviewed a computer program that supposedly emulated a psychiatrist. Patients were recruited to talk it, and supposedly they believed it was a real person. Now I don't believe this anymore than I do Little Red Riding Hood has a mouse as a good story! Anyway Eliza is a PC version of that comic

program. There have been claims of viruses of this program on various platforms but this is the first Atari version I've seen. This release supports briefly the keyboard and mouse and offers options to connect to the author's homepage or

Eliza itself. Each option displays tree-like structure of any file or segment, displays a dialog showing the structure, tree and class name, file and source file along with an option to delete the file.

A right mouse click anywhere inside the window displays a pop-up menu with options to display the file contents [so-called a "view part"], delete tree file contents, set the highlight and hide/unhide options.

DiskCaker can be run as a desktop application or program from the desktop and contexts generated from the AV protocol. DiskCaker is bilingual automatically switching between English or German versions by reading the _AF and _DE files.

DiskCaker has my very fond memory when it occupied my hard drive as a sort of my resident utility.

Martine Bures

80%

and that is used there, many options are your wife, brother or mother. It also has a few little useless things. A button to get Grace Hopper has never used, a single page or so. This depends on everything you put into it but that gives special responses to certain stuff. For example typing in Pink Floyd results in the reply just Pink Floyd, because Grace is a real person but she's [long] it's good though when you have nothing better to do than a key or two.

Triple Yahoo

Entertainment, Games, all Atari
Author: Stuart Germain
Email: sgermain@sympatico.ca
Web: /www.threely.com/~stuart/
tripleyah.htm

This C64 version has been around a while but it's been too long and needs publicity in my judgment or cause death. Triple Yahoo is a Triple Yahtzee clone, they're both numbered variants of poker dice, and I cannot personally play this game game before.

Up to four players can compete against each other or you can play solo and try to beat the high scores. Triple Poker is a much more subtle strategy than rolling dice like poker dice you have up to three rolls of the dice to come up with four best scoring combinations using the total poker combinations themselves of a kind.

total combination is less important than where you place it on the scoreboard. The scoreboard has three columns each displaying a twelve scoring combinations plus three chances to provide your score a total of 19 slots which can be filled throughout the game. To add to the mystery the three columns score normal double and triple points. It's easier to play than to explain! After each turn you must reflect immediately on the scoreboard to score your points (including an option

print slot, scores using and maximum point total). It's easy after. If you rolled four ones you would score it in the last of a total row in the triple points column but in the last slot in all you have to score up with a winning strategy to come out on top. The icons and the colors used can be selected, everything is addressed and C64/TDF64 can run on QMRA sound effects. ST users have to enable its with a command. There's also a basic on-line help screen which has the scoring rules section and a game timer under. Plus I found that game scores indicate if not playing it for ages instead of winning the award. It's the perfect alternative to Pinball for the Atari 80's user. Just have up left) and I've added to my shadow of games I've been making no longer for ages. Triple Yahoo is supported by CyberLink and registration costs a £1.

Martine Bures

NEWSie v0.94

This compact newsgroup reader also offers web browsing, FTP and email facilities. Jack of all trades or master of none? Derryck Croker opens his notepad...

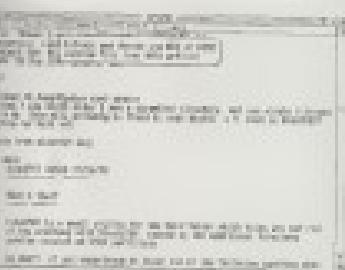

NEWSie is AT&T's client to a mailing list. NEWSie TCP/IP needs and an account with an ISP (Internet Service Provider) are pre-requisites.

Newsgroups

There are many groups covering almost any conceivable subject, and depending on your ISP, the list of groups available can be very long. Once you have downloaded a list of available newsgroups (selecting no individual newsgroups at a single point), and with operation 'Get latest messages' option selected, Newsreader appears in the following viewing mode. Click on the 'Newsgroup' tab to add the newsgroup to the **NEWSIE GROUP** file used by NEWSie to determine which newsgroups to download articles from during the next run on the system.

The Article view window has a similar function. When an article you have read, which are currently available for your news server, are displayed and there can be encapsulated on the screen, links to individual entries can be read or left-clicked. Clicking on them or individual articles, another window can be opened in Read if they don't look promising enough and for any relevant posting, switch to the relevant news headers which plague Usenet newsgroups.

The Read for offline option downloads all selected articles to your local disk for off-line reading. This feature features improved download handling. Individual messages, streams or just a single newsgroup can be selected for retrieval and it is now also possible to batch previously downloaded messages.

As mentioned two indicators for the status of the individual news header tabs - reader and news header window can be selected. Newsreader cannot read files it is unable to process (HTML) say.

(unfortunately this was only possible by hard coding **DEFAULT.GRP**).

Reading and posting articles is nothing unusual. However I find the Newsposting window offering offers a surprising range of options. For example the only way I can find to send a press mail message to a public article is to use Reply posted from the Mail drop menu item.

NEWSie offers a choice of encoding methods and these should otherwise be used to binary file attachments (anything other than plain ASCII) over the network. Please note a correct binary file should only be passed to binary news groups otherwise you will become very unpopular! NEWSie is built on the concept of the same features world wide and makes a welcome change from self-centred TFTP utilities.

I have read reports from users reporting back or file corruption when downloading articles. For my experience this has not been and follows the advice in NEWSIE.DOC. There better are some particular subtleties for NEWSie if you have the blank disk space.

Web browsing

True 'only' browsing has been integrated into the web reading window where clicking on a quoted URL, while on-line takes you to that page. When it reaches a file (or a file above) it will look at a file's extension to see if further download should be carried on this area or the main menu. NEWSie uses a CWWW via the Gopher protocol or under a multi-threading CWWW via the AV protocol to CWWW.

Email

In addition to the basic email features, NEWSie offers some additional items. These are 'Comprehensive Address' feature which can be configured to repeat any email which doesn't match your supplied address. Incoming mail can be automatically deleted via deletion of the message which causes it to stop. Keep reading here because there are many other possibilities.

There's also a useful address book and assistance support and a friendly growing 'From the author lurking in the incoming mailbox' - a nice touch.

To help protect your NEWSie can be configured to hide your real email address. However if you do want to receive emails you need to make changes. There's currently no easy way to do this either. NEWSie does have a complete and useful incoming message viewer and reader which can be used using NEWSie.

FTP

File transfers of files are just waiting to be transferred using NEWSie's FTP (File Transfer Protocol) feature. It is simple to configure using this feature. Pick a server from a user supplied list of FTP sites, specify a file to transfer and the rest is self explanatory.

This related with the ability to upload multiple files at once and read the file directory too. This is also the first release which works properly with CWWW and probably other sites.

Conclusion

I started this review using NEWSie v0.90 and the release has addressed ALL of my earlier reservations to apart from the minor bugs mentioned here. It seems more robust.

NEWSIE v0.94

Status: Pre-release
Author: John Rasmussen
Platform: Macintosh, Sun
<http://www.giggle.com/~jrasp/newsie.html>

System: All Above, 1MHz memory and 128K high resolution memory
RAM: 1MB direct memory access

Price: Newsletter receives updates of software releases. To be supported by the Author in the compayments of development. All personal support, ongoing developments.

Other: Download web browsing feature. DragNDrop, GZIP, GCA, Strongbow or GEM/Motif support. Log file compression each time file has a name.

Calamus Secrets

Dave Berklin reveals Calamus SL/PII to be the most powerful Desktop Publishing program available for any computer and has decided to reveal some of the hidden secrets he's discovered...

Calamus isn't perfect, there's always room for improvement in the current popular printer and there's no on-color printing support. However, as the photo, there are plenty of reasons still drive update and Calamus is reasonably fast - faster than Apple TT than Quark Express on a 386/386+ Power PC.

As Calamus users will be aware it is a page-based program. Images, text, lines and so on are all placed at specific located frames but there's one frame which ought to be returned. The program refers to this as the *Bridge Frame* just prior to call it the User-defined *Bridge Frame/Cropping/Clipping/Print/Frame*.

The user-defined *Bridge Frame/Cropping/Clipping/Print/Conversion Frame!*

The user-defined *Bridge Frame/Cropping/Clipping/Print/Conversion Frame!*

According to the Calamus manual to place a portion of a page you go to the crop icon and draw a new *Bridge Frame*.

Then at the *Print dialog* you highlight *selected* and only that portion of the page covered by your *Bridge Frame* will be printed. However, except there were problems with this option right up until the latest release of Calamus 3.0 (R3.0). Every time I pressed using the *bridge* icon to outside the frame would break tasks. I'd click on what we had to do to return I rarely used that particular feature. Anyways, since that now this is gone in R3.0 Frame. It is one of a couple bug and a looks like the program owners didn't notice when they last checked.

If you use the *Bridge Module*, which converts and exports layout and pages to various formats, you add first the *Bridge Frame* is probably invisible in this *Module*. Whatever portion of the page the *Bridge Frame* covers is considered part of the *Bridge Frame*. So far, this means that if you wish to convert a mixed page of graphics and text in an image, simply cover it with a *Bridge Frame*. Then using *Bridge* (either as export or convert) you can convert the contents of the *Bridge Frame* into the desired format!

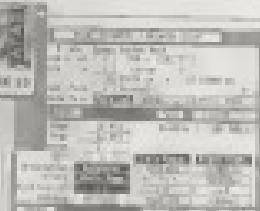

Calamus has a free cropping function but is a mouse controlled wheel menu, you have to draw using the cursor and if the result doesn't quite match your needs you have to abort and try again... and again!

Using the *Adjustable fitting frame*, you can draw a frame to the exact size of the desired crop, position it exactly where required and use the *Bridge Module* to perform the conversion. Better yet, *Bridge* allows you to specify the crop as well as the type, so you can have a frame adjusted to the required size and *R3.0* does a better job than *Bridge* does. You can also use the frame to convert to raster and vector graphics. Although you cannot convert photographs to raster format, you can convert text and vector shapes or other vector to raster. Any frame can be converted to raster image. This gives you the *Bridge* to crop then export groups of text and vector shapes for subsequent use. The latest version of Calamus has the *Mask Module* but the program and mask frames can be

blended into other frames. The *Bridge* function can be used to crop/reorient a photograph as well. I should also point out that *Bridge* capabilities have been enhanced since the free Calamus 3.0, version 1.0 (R3.0). Every time I pressed using the *bridge* icon to outside the frame would break tasks. I'd click on what we had to do to return I rarely used that particular feature. Anyways, since that now this is gone in R3.0 Frame. It is one of a couple bug and a looks like the program owners didn't notice when they last checked.

If you have any Calamus hints and tips or share any suggestions for how a Calamus related article should get on touch via the editor's address or by email:

dave@berklin.com (ringing zone)

Calamus 3.0, R3.0 *Bridge* drivers. Given that released from 3D systems which support almost all Epson printers in *Windows*. They do not access the *Windows* code because this is incorporated by half mapping the device and passing a second raw of data underneath the free *Windows* software incorporation which usually only provides a general interface to *Windows*. Until integrated with the *Calamus Star Scanning Module* you can achieve much better results in *Windows* than Quark Express or *Windows*.

Using the *Bridge* mapping with Calamus 3.0, both these drivers work. The same was under control and you'll enjoy the software!

The above driver produces slightly better quality, although less so in practice. I tend to use the *Bridge* as the drivers do not work with Calamus 3.0. This

Layout Modules

Hey, what's going on here then?

David Encill details the modules and packages.

Unfortunately, due to time constraints this will be the last column on the DA's Layout Tutorial. So to wrap up this series of articles all the available packages and optional modules will be summarized.

DA's Layout Pro

Include integrated Font Editor, Barcode Generator and Vector Animator. Because DA's Layout uses its own font server (font server) converting DTFM and PostScript fonts to the above for more flexibility with relations in the manipulation of fonts, e.g., graphic text can be rotated, scaled, skewed and perspective distorted; in addition the font editor can create true outlined fonts. Unlike typical fonts offered in other DTP programs with Post and Step learning also supported. DA's A and DA's T fonts can be generated directly with the program. An essential utility when dealing with commercial packaging.

Right: The Accessories Toolbox

The Vector Animator provides a method to convert bitmap images into smooth vector objects. Naturally you can then apply any vector transformation to the object, including fill, rotation, skew, stretch etc. The Accessories Toolbox also includes the facility to differentiate between CMYB colours. This is extremely useful when working on a colour image when a variety of different hues need to be preserved and independently altered.

Below: Transforming bitmap images into the spectacular with the Vector Animator.

DA's Layout EPS

Included in the options within the Pro version plus the Clipping Paths and EPS/PS/PSL Driver modules.

Clipping Paths are incredibly easy to generate within DA's Layout - just select the area(s) where importing a photo into any DTP program the background can be removed part of the image. As can be seen from the sample image, the overall impact of the design is greatly enhanced when the the chosen path is applied onto the background. The selection tool is used to define the crop effect.

Clipping Paths are created by using the standard selection tools to create the desired shape and the Vector is then mapped onto the image using the appropriate tool within the image toolbox. If an alteration needs to be made this can be simply changed by 'unclipping' the vector from the image (using vector based a Clipping Path does a problem). A clean solution.

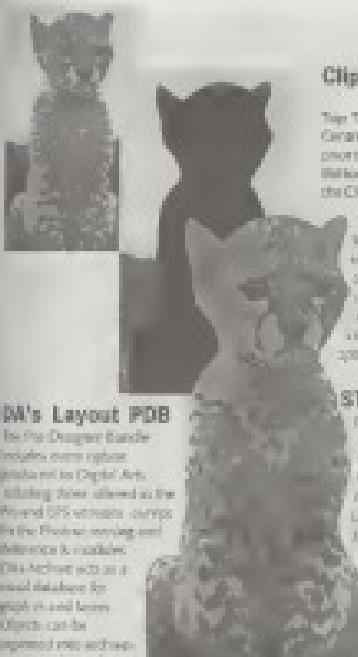

When attempting to clip more complex images (like the images below) you can't simply just creating a shape around the desired object, rather than 'clip' the entire document which would have been extremely time-consuming!

The EPS/PS/PSL Driver module is important in terms some method of compatibility with PC and Mac files, digressing the import of suitable Adobe (Raster) files complete with Clipping Paths and embedded trans-

DA's Layout

Trace

DA's Layout PDB

No Pro-Designer bundle includes colour options.

Published by Digital Arts.

Release date: offered as the Award DPS version, comes in the Photoshop naming and reference book available.

DPS Archive acts as a visual database for graphics stored here. Objects can be imported into artwork and pasted directly onto documents.

DA's Collection uses a unique live Colour palette to accurately calculate the screen display to the exact colours used in a poster.

DA's Compose is a powerful module to allow the merging of multiple images, vector or bitmap to create exciting collages. Delicate transparency techniques, luminance and CMY values offer enhanced variety.

As can be seen in the screenshots below, the right-hand bar has been merged with the double cat-in-a-potato character. The example for creating 3D extrusions will be covered in the previous article.

Clipping Paths

Type The original image

Create the vector path around photo using the Clip Function button. The complete image with the Clipping Path option applied.

In summary, DPS Layout is an extremely powerful CCP and has the following tools which can be expanded to other applications and a variety of resources with the option that are available:

STOP PRESS:

During the writing of this article it was announced by Digital Arts that version 2 has now been released and the basic version of DPS Layout has been reduced to £39.95. In addition there are reductions for all other modules of the program and a 20% discount of the optional modules.

For further details please contact me: da@jewelsoft.co.uk

DA'S LAYOUT V8.2

New Version!

DA's Layout has been upgraded and now boasts more than 2000 new features, making it something of a 16-level brain feature. Some significant and revised menu improvements as well as CDR, the Clipping Paths are now included as well.

A complete demo can be downloaded from <http://www.digital-artists.co.uk>

PRINT TERMS (L TO P)

Landscape. The orientation of a page that is wider than it is tall.

Leader. Any character, usually preceded by a short line, used to lead the reader's eye across the page. Leader lines often fill tables.

Leading. The additional space between lines of text, usually measured in points left-aligned. A paragraph with a single left edge and a ragged right edge left-align. The distance between the left border of a text block and the beginning of a line.

Legends. A pair of combined lines, i.e., an 'or' and a 'not'.

Line per inch. Commonly referred to as LP, it refers to the linear width of the typeface, i.e. half an em.

Margin. The space between the edge of the page and the content area, referred to text and graphic elements.

Margins. The margin used in the creation of a page or a printed page. In desktop publishing, it refers to the area I am trying to print on.

Mirrored. An impression, such as when the foreground element and its background do not exactly line up, leaving white gaps between the element and background colour.

Montage. Text patterns created often in more or less semi-supervised effort. The distance of an element from several points.

Oblique. Special characters that appear as additions to the letters and numbers of a font, e.g. flourishes, or italicised letters.

Outline. The first line of a paragraph that starts at the bottom line of a column.

Overprint. The process of printing one colour on top of another. If the background colour is darker than the foreground printed, the background may show through the foreground, thus changing its colour.

Page Comments. The comments you can use to align and compare pages. Typical comments include registration marks, crop marks and colour bars.

Pica. A unit of typographic measurement.

There are 12 pica to an inch and each pica contains 12 points.

Picas. A unit of typographic measurement. There are 12 pica to a pic and 12 points to a pic.

Portrait. The orientation of a page that is taller than it is wide.

PostScript. A page description language created by Adobe Systems. PostScript describes fonts and graphics and how they appear on a page.

PostScript mode. A measurement used in font measure resolution.

BINLINER DEMO**MAGGIE**

**Binliner Demo preview screens by Avara
Falcon-only
Entertainment - Freeware
Overall: 80%**

There is a bit mismatched to those screens as there were incomplete four and with space a lot more added on besides intended to be the follow up to the 1997 grandiose demo *Binliner*. However, the main author, Tim, indicates something along the line and named the whole project.

Fortunately, he has decided to release the work completed so far in the form of the source code and also the three preview drivers completed. This is their story:

"The first driver is called *Prisley*, and is some sort of very elaborate sound feedback effect, most easily described as a

We make no secret of our continuing enjoyment of the strange world of the demoscene. This demo created by having you a longer than normal review of the most appealing new items of recent news, apparently written on the PC. Please ET consider. We also take a look at some materials from the tragically lost *Barbar Falcon* demo. The source code and early work in progress has thankfully been released, so we may see something of this masterpiece in the near future. Next time there should be a full show report in these pages of the forthcoming Berlin meeting known as "Enter to Live", which will be attended by members of the Maggie Team.

Chris Holland

172-174 High Sts

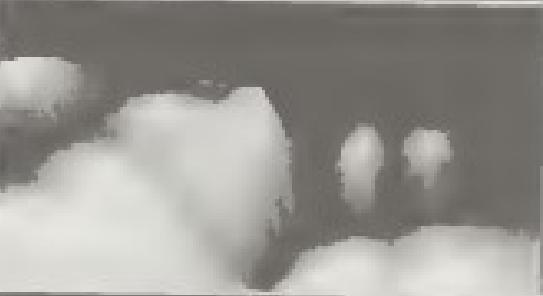

Richard Street and Chris Holland
are The Maggies Team, Inc.

version by a psychiatric version of one of the great works from Daan.

The game *de resonance*, and the last release of what the final finished article would have looked like is a driver called *Phoenix*. An amazing response with something like multiple sprung "springs" for movement looks like a real show

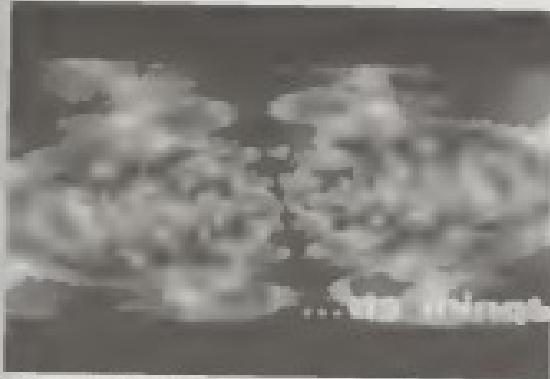

set against a dark and brooding landscape. Probably the most complex driver effect screen ever seen on the Falcon, and one which makes the loss of Tatashi! the Atari scene at the border to bear.

Just another warning over the pack up where he left off?

Do Things Demo by Cream ST, Falcon, and PC emulators Entertainment - Freeware Overall: 85%

This is a welcome return to the Atari demo scene, after a long time away by the German crew Cream.

What they have to offer us is ST demos at least, but it carries on where departing Agnos released their Puddles collection on the PC. A technical note, for this demo is that the majority of it was coded on Falcon, rather than a raw ST or Falcon! Also a large part of the graphics were programmed with Photoshop to save time, so my hat's off to another one of the invisible tools on hand.

It can be seen as a naive, unpolished happy smiley in progress, to us as an MP3 file, but there is a surprisingly pleasant TDF-ableable for those of us with band drivers and razzmatazz (CP/M and DOS-4-DOS) users.

Putting the demo into you off with a portfolio of tile graphics and sprays, it's smooth sailing through. You know that you are at the first part of the demo proper when a brilliant neon colour blinding screen follows, heralded by Agent T letting you in continue!

The first of many of the wonderful specially-composed tunes starts up at this point, a TDF tune, with distinctive SID like twinkles. A bunch of self contained modules and then they come the sprays. We are equal for the first three parts of the demo!

The effect part of the demo is next, a musical looped beat putting several sprays with its different 1-0 beat in various places! Hard to describe because no one is action, and very well implemented for an ST's limited range of effects on screen. This is a single effect, but will vary

in colour on the screen, all of them wonderful. More credits, and a great number of greeting pads so the user of the screen to make themselves known as well.

The end section of the demo is predictably perfect, a bonus mission was around 15 hours or so. Two tunes finishing your work. The screen has a slightly Cyberpunk feel to its design. The first follows a line from Tex Willer, we all M'Ding based, with a sound quirky very much like a modern day Cyberpunk did. Well everything is much of a suggestion if you think, it's a logical progression. Cream produce a Shining player, next step, a Shining composer.

Rushing on the quicker pictures, the new wave of喷射机 on Agent T produced staleness. We're currently down to more and more watercolour effects and looking constantly self served and scarily brilliant, interesting, but too

Holding marooned the platform, and enjoyed the tunes, you might well think that's it all, but there is one final surprise. The do things demo! That's even in Things that mean you go internet, makes a person want to click this demo as well.

Having perfected a modus operandi that works on all machines, this was necessarily twice in Cream's memory for the only one demo. This final part consists of returning to the early platform with credits once again, but with more character objects inserted in, such as a Pez dispenser, and most surprising of all, a pair of eyes in a 3D falcon. Again the effect needs to be seen to be really believed, but it's clever and understand!

I enjoyed revisiting Cream Do Things and I am sure you will too!

A "Cyberpunk" 24-hour game
The Stupid Balloon Game by
Eddies Cat.
STe and Falcon 630
Entertainment - Freeware
Overall: 79%

This is a supposedly simple game, apparently based on some obscure game of ancient gods, though currently being evaluated as one of the most bizarre anomalies on the PC.

The game objective is very simple; you take your bulb balloon around the screen with keys like a computer relief map of one of the obscure Norwegian Fjords, collecting our symbols to gain points as you go along. You have six total cars as you reach one of the jetties part of the landscape your balloon detaches and you lose a life. After three cars, it's all over. In a mix of the old surreal and people who are comfortable with Applesauce type games will be happy with this one. The other ones that came to mind was a very simple E. Howard Conservation rather than a highly advanced 3D car racing across no path style maps, or much more user-familiar jagged. There is also a pretty ugly 3D version which looks as well and fails to complete the screen within that means it's stuck in the sky right screen to another place poor translation as well. (Though if you're here with me, please have the happy task of reviewing the other two parts.)

The game runs on the STe and Falcon using the Z80 hardware to make a bunch of fun Shareware移植 when carrying out different tasks, one for one initial character. It was first included in the Reservoir Gods Amiga demo from the previous summer. The graphics are nothing exceptional, but they are clean and show touches of the genius of Doctor Who says. The only issue is available is that it's not run from the game in case every Falcon friendly viewer has problems on generic OEM and internal logic, the end result. This is just a very static panel though, and the 3D based off game is a little bit of a cluster.

Richard's Free Lunch

Q&A

"We always have more answers than questions"

PCU source

Q Do you know where I can get a source program of the Magix ST2 SCSI Filter driver so I can see how they've done a lot of sorting and searching that's not obvious? Obviously I'm looking in the wrong place.

Forwards to OpenOffice or CDE interchanging conference

A There are a couple of interesting solutions which get very hot and eventually crystallise the solder around their legs causing the power supply to fail. One removed ST2 power supplies several times by considering any suspect connection to the underside of the PCB.

John Evans,

CDE interchanging conference

Something for nothing?

Q I have come across many free internet access software for PC users and it's hard to avoid the gateway CD ROMs from Discus, Trendy and Tally. Can this newsgroup suggest a free by anonymous user file solution for home netting up Freezerite ISP with its cracklin' CDE net facilities feature? Surely there are lots of do-it-yourselfers even in a dozen universities? Yours is particularly

Mark Fawcett

A We've had a long series of replies to this question so I've included the entire thread on the Reader Disk along with the configuration files mentioned here - good luck and when you get up and running drop us an email.

- Target offline via Freezerite using CDE ST2iC and a suitable CDE CVS processor as follows:
- Set ST2iC a DEFAULT.CFG and DIAL.BIN with your details. The DEFAULT.CFG file is the Reader Disk in the process of being "installed" for best performance with the original values commented out for reference. Change reader processor to suit your needs.

- If you'd like to be able to log in to another ISP or want printed as follows:

Copy the DIAL.BIN to the same directory renaming it to reflect the name of the ISP if you want to log in to. Then in the details of your proxy servers under "Network Resources", set the DEFAULT.CFG file to the requested format. Change proxy methods and password details and so on to suit. Then you can select this script at the ST2iC filter by clicking on the "Dual" option bar at the top of the "Config" menu.

- If you're experiencing problems making a successful connection it might be that your ISP doesn't use a PAP (Password Authentication Protocol) connection. Try connecting with a terminal program such as ZTerm Pro... and respond to each of the questions with the default given to you by your ISP. Most likely you'll be asked for your login name and password.

Then you're logged in completely the screen should fill with incomprehensible characters. Just above the cursor on will be the appropriate telnet prompt referring to your log in details. There's an example screenshot on the Reader Disk called SCRIPT.ASC.

- If you've made a successful connection to your ISP (via ST2iC filter) re-open CDE/CDM to repeat the connection. Rebooting hasn't proved to help.

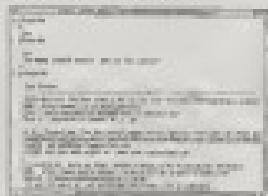

Double check that you're using a ST2iC-compatible overlay. Double check the proxy server details in the DEFAULT.CFG or DIAL.BIN (whichever appropriate). Proxy server programs CDE-based ones ("NetKey" for example) may not be carried overwell if you add them as extra in the DIAL.BIN.

- If you're using the latest CDE CVS and there is a delay when booting through your offline cache, Load the data into memory alongside CDE. Single Task with cache running the ST2iC filter with an ADD extension and load it as an accessory. A recommended choice of address anyway (you will need to copy the ST2iC file to the root directory of your boot disk as well). Or use Discus (which is a newer version from #4000 onwards available from <http://tinyurl.com/28198fzv>) and run it from bootup.

Thanks to Discus, Crisler, David Cohen, Andrew Morley and Keith Haines for their contributions to the thread in the CDE interchanging conference.

Making your mark

An alternative solution would be to use the registered marks (registered feature in your font editor, Berlitz, etc) and both of support sheet

After setting up your logo in the fonteditor file you can either save the file as a .bfz file or export (using a .BDF file) in Berlitz, with "Register yes" in [Font] adds a registered and "sig font" adds my full signature. This message can be extended to support as many signatures as you like.

Joe Corcoran

GMaster class

Q Is there any way I can convert Access DBF files databases into a format which will allow me to load them into Microsoft Access or my other PC based database program? If not, could I edit my Access database files on a PC by using an emulator of some sort? Many thanks, in anticipation of a helpful reply.

From the accompanying author

A Creating a report-to-disk will give an ASCII file that will easily import into any other database. The fields are positioned in their full length each record so you can use a macro like the ST or the PC to add content as required by the new database report file.

Paul Oliver (ReadIT Club)

A In general, as long as you can extract data from a database in human readable format you'll be able to convert it for use in any other database.

If your database allows you to select the separate character fields using quote marks and commas because these are commonly used for house names and line separators in postal address fields, I prefer using semi colons.

Emulated file typically use quote marks like the vertical bar character, semi-colon, carriage or other character as field separators and when attempting to import these look for Comma Separated Variable (CSV), Text or ABCD import options - try them all your mileage may vary.

Alternatively you can probably combine in one GMaster using any of the popular

Atari ST emulators including TOSBOK, Gamebox, Magic PC, Shareware, WinSTO, PeC64T and others.

Joe Carter

MAXIMA/PK

In the release of MAXI 3.0 it no longer possible to make your own printer drivers. I have been in contact with Andrew Barnes about MAXI 3 and was told there are MAXI/PK/PMS with it. What can I do now, or facilities for making your own drivers? I asked for what happened about printers but the disk I have about 10 new models. He replied that a program like MAXI/PK would automatically add help files.

It was printers appeared that don't work well making drivers than it is usually necessary to program new printing processes (new commands or different structures of the memory-data).

On a different topic, I also asked him about the grouped print option to print side and front pages with MAXI/PK and MAXI/PMS. It's Andrew's opinion that some printing dialog functions needs special support from the secondary programs and if the program does not make these functions available then the solution has a problem.

Peter West,

CDX microcomputing conference

Media Change Bug

QI have an Atari STF which I use to run StarCraft Pro 24 requesting software. It also runs with the Lotus Draw Selection v1.0.

Today something happened while I am using lots and happened not in the past. While using PRO 24 I need to save a long. The floppy selector box appeared suddenly stating that I needed to use the long on another disk. I managed the two disks and saved onto disk 2.

EDGAR TAYLOR The message I showed that button (by anomaly seems worse) was, I think the file was saved but it was not the file I have lost. On disk 2 was another file but the disk reads the file of file I had on disk 1 which was in the drive originally.

It is very possible that the file that I have deleted was written across parts of the file I have lost, so disk 2.

My hope is that because disk reads the wrong file that when it reads the right file (which is required only for the file I have saved and the file I have lost) that I will lose/reload my lost file.

I am sure I managed to rescue the file, when this happened but I can't remember how to go about the rescue.

What are your thoughts?

Pat Andrew Wright,
CDX microcomputing conference

A If you have interrupted the read directory because the drive didn did not recognise the seek change it is called the media change bug. The chances of recovery of lost files are minimal unless the file was not fragmented and the file size was to a previously unused part of the disk. Even then, it would be hard to determine which clusters were used and trying to do that, unless you had a record of the sectors.

In theory, you could avoid this by pressing the [Shift] key which forces TOP to re-read the disk. Alternatively click on the drive to force the file selector (assuming you are using A) and have only a single drive selected and you'll be prompted to insert disk B = drive A, and the directory will be re-read.

Peter West

A There is a slim chance of recovery. The chances are better if the file was smaller and if the floppy the sector sought it was trying to load more data on than the one you usually access to. the chances are it may not have overwritten the file but which you hopefully at the start of the floppy.

- 1 Open A series to the floppy at all. If you have MAXIT, use it to create a identical copy of the floppy and work on the copy not the original.
- 2 If you technical and it might be an idea to get help - but even though binary files are fairly unrecognisable the file cluster is often identifiable. For example, PDFs have the extension PDF somewhere in the first cluster. You need to examine the first cluster of another file of the same type to see where pieces are any close to its cluster.
- 3 What you need to do is to try the file length, but you might be able to get away without it.
- 4 Determine file on the floppy which starts with it (for example file which are to the test file option though it isn't working yet), but now the one you really did accidentally write (because that one really is there).
- 5 You have to do an indefinite search BUT you don't need to take the starting cluster (or length) from a different file. I would approach this with something like KVENT's built compressed and manually look for the starting cluster. First place I'd look is the first few clusters.
- 6 You can build the file back to the original length using additional free clusters. If you don't know the length and are lucky, the application will read the file only up to the valid part, or you have to use a lot of trial and error to get it back to the right length.

Clay Shadron

Give XBoot the Boot?

QI have recently run into a real nuisance type problem with my Falcon 1. I have a 4MHz Falcon with 128KB IDE HD and have been using XBoot II for protection on a Plus4 ST. TT and 3DM the Falcon. Recently I attempted to upgrade my IDE Driver 7.12 to 7.14 and my transfers stalled. This drove down mouse (unless HOLDING), APP and certain parts of the dialog boxes. I gave up temporarily and decided with the mouse transfer running lame and no FDD's would become usable. I tried the upgrade on another Falcon and got the same display problems. Once I noticed that when I turned up the Auto Select it would become unresponsive over the course of the session, but it was frozen in place. There was also a flashing cursor bar on the lower left edge of the screen, data unusable. The keyboard keys of worked normal and the chosen file was usually successfully read the mouse that would work as normal on the desktop. I noticed that I acquired the Auto Select and one XBOOT/FDD file from the starting slot. It would have normally held a fully bootstrapped status on the XBoot screen.

I have removed everything from the Auto Select, reinserted the AutoSelect with just XBOOT/FDD loaded. I have reprogrammed the hard drive and re-installed early versions of IDE Driver (7.12/7.13). I made sure XBOOT/XBoot files, but I can't make XBoot run from the Auto Select AND have a bootstrapping process. I tried but was still given back under the Pay symbol on booting up the system. Furthermore, I have tried every possible parameter selection in XBoot, different parameters. Resultant no XBoot is shown any sign of life at the end of the session.

Pat Andrew Wright, CDX microcomputing conference

A Possibly XBoot has become corrupted. Here there seem my XBoot changes needed a badly functioning XBoot - Check the XBoot settings (XBoot), I checked and at some point needs to be reprogrammed to work properly and avoid problems with booting XFS. "Booting" program can corrupt.

Clay Shadron,
CDX microcomputing conference

A It's possible the disk's resolution is in HD/HDH might not be t. XBoot II reprograms the chip in place of XBoot. It allows the resolution of the desktop also having to be set independently of selecting one of AUTO/HD/HDH and is designed for the Falcon. The only disadvantage is it is not as much as other machines.

Floppyshop Software

Positive Image 2

Positive Image 2 is a powerful image editor that allows you to edit your digital photographs. It features a wide range of tools for cropping, resizing, and enhancing images. You can also add text and graphics to your photos. It's perfect for anyone who wants to make their photos look their best.

Easy Text Pro

Easy Text Pro is a powerful text editor that allows you to edit your digital documents. It features a wide range of tools for editing text, including a spell checker, a thesaurus, and a grammar checker. You can also add text and graphics to your documents. It's perfect for anyone who wants to make their documents look their best.

Easy Text Pro Vector

Easy Text Pro Vector is a powerful text editor that allows you to edit your digital documents. It features a wide range of tools for editing text, including a spell checker, a thesaurus, and a grammar checker. You can also add text and graphics to your documents. It's perfect for anyone who wants to make their documents look their best.

EZ Art

EZ Art is a powerful image editor that allows you to edit your digital images. It features a wide range of tools for cropping, resizing, and enhancing images. You can also add text and graphics to your images. It's perfect for anyone who wants to make their images look their best.

Family Roots II

Family Roots II is a powerful genealogy software that allows you to keep track of your family history. It features a wide range of tools for managing your family tree, including a pedigree chart, a birth certificate, and a death certificate. You can also add text and graphics to your family tree. It's perfect for anyone who wants to keep track of their family history.

Easy Stitch

Easy Stitch is a powerful image editor that allows you to edit your digital photographs. It features a wide range of tools for cropping, resizing, and enhancing images. You can also add text and graphics to your photos. It's perfect for anyone who wants to make their photos look their best.

Gemulator

Gemulator Pro

Gemulator Pro is a powerful game emulator that allows you to play games on your computer. It features a wide range of tools for playing games, including a game library, a game viewer, and a game editor. You can also add text and graphics to your games. It's perfect for anyone who wants to play games on their computer.

How to Order

If you see next to a product that you are interested in, then go ahead and click on it to add it to your shopping cart. Once you have added all the products you want, click on the "Check Out" button at the bottom of the page. You will then be prompted to enter your shipping information and payment method.

Please note: If you are a member of our newsletter, you can receive a 10% discount.

Fmax

The way forward.

Falcon maximised

Expand the graphics capability of the Falcon to produce fast, high-resolution, true-colour displays!

With the VDI Frame VDU software Eclipse has already achieved 2x times acceleration on VDU text rendering at 16-bit colour against a standard Falcon with 256 colours.¹²

STANDARD FITTING

Eclipse's compact standard PCI cards can be used within a standard Falcon case!

NEW DIMENSIONS

These can be expanded to a full PCI board - 3D cards up to 1400x1200 with high refresh rates.

GRAPHICS

The graphics card equivalent to the excellent ATI Rage 128 running the Riva 128 3D object. Future support could include Vesa GL cards.

Maximum resolution at 16.7 million at 600x600 or 256 at 1024x1024.

OPTIONAL

PCI case (Falcon only) ... from £139.00
Disk on board (Falcon only) ...

Link 97, SCSI adapter for the ST ... £49.95
Low profile SCSI card (Falcon)

Falcon Internal SCSI Bus Kit ... £79.95

SCSI External Case ... £79.95

Ultra SCSI (2MB) to Hard Disk

HD Driver 2.6 ... £74.95

Serial port adapter ... £11.95

Afterburner 1680 KC ... £199.00

(see note 1)

DAT Layout v. 3 ... from £149.00

long and short version. Various card options and plug-in modules available - call for details

PC GRAPHICS - add-ons

14" SVGA monitor ... from £719.00

15" SVGA monitor ... from £117.00

17" SVGA monitor ... from £179.00

15" SVGA monitor ... from £179.00

ADDED FEATURES

Microsoft 3D Video Acceleration ... from £119.95

3D VGA (links v.3) ... £209.95

4800 SCSI Link v.3 ... £379.95

PERIPHERALS

HP DesignJet printer ... from £99.00

Intergraph 3D printer ... from £99.00
